5. SETUP INSTRUCTIONS

Follow these steps to connect your Camgeet KVM switch:

5.1. Connection Diagram

Each PC only needs 1*DP+1*USB cable to connect with the KVM to get dual-screen DP+HDMI output

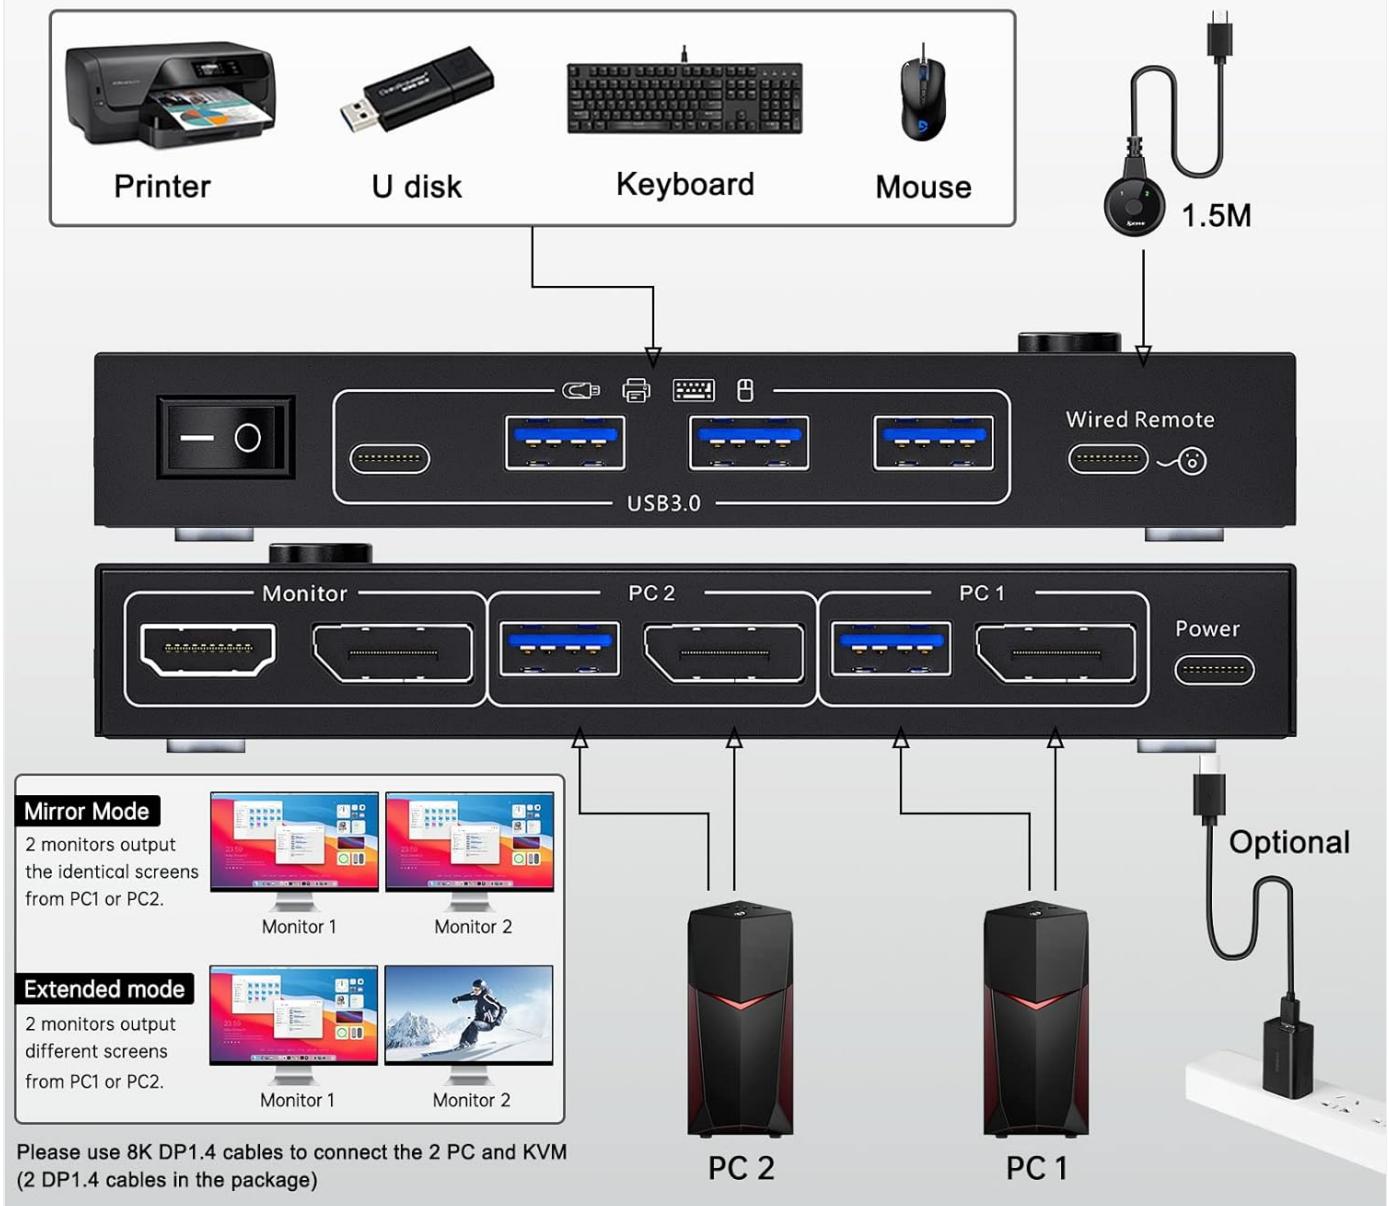

Image: A detailed diagram illustrating how to connect two PCs to the KVM switch, and how the KVM switch connects to two monitors and various USB peripherals like a printer, U disk, keyboard, and mouse. It also shows the power connection and the wired remote.

5.2. Step-by-Step Connection

- Power Connection:** Connect the provided USB-C power cable to the "DC/5V" port on the KVM switch and to a 5V power adapter (not included, or use a USB port on one of your computers if not using high-power USB devices). Ensure the ON-OFF switch is in the OFF position before connecting.
- Monitor Connection:**
 - Connect your primary monitor to the "Monitor DP" output port on the KVM switch using a DisplayPort cable.
 - Connect your secondary monitor to the "Monitor HDMI" output port on the KVM switch using an HDMI cable.
- Computer 1 Connection:**
 - Connect one end of a provided DP1.4 cable to the DisplayPort output of PC 1 and the other end to the "PC 1 DP" input on the KVM switch.
 - Connect one end of a provided USB 3.0 cable to a USB 3.0 port on PC 1 and the other end to the "PC 1" port on the KVM switch.

USB3.0" input on the KVM switch.

4. Computer 2 Connection:

- Connect one end of a provided DP1.4 cable to the DisplayPort output of PC 2 and the other end to the "PC 2 DP" input on the KVM switch.
- Connect one end of a provided USB 3.0 cable to a USB 3.0 port on PC 2 and the other end to the "PC 2 USB3.0" input on the KVM switch.

5. **Peripheral Connection:** Connect your keyboard, mouse, printer, U disk, or other USB 3.0 devices to the "USB3.0" ports on the front panel of the KVM switch.

6. **Wired Remote Connection:** Plug the wired remote into the dedicated "Wired Remote" port on the KVM switch.

7. **Power On:** Flip the ON-OFF switch to the ON position. The KVM switch will power on, and the LED indicators will show the active computer.

Important Notes:

- Ensure you use the provided DP1.4 cables for optimal performance and resolution support.
- The input only supports DisplayPort (DP, mini DP to DP, or USB C to DP adapter). It does not support HDMI/VGA to DP input.
- The output supports DP to HDMI when connected to an HDMI monitor.
- For higher resolutions (e.g., 8K@30Hz), ensure your DisplayPort cables are DP1.4 compliant.
- If using high-power USB devices, an external 5V power adapter is recommended for stable operation.

6. OPERATING INSTRUCTIONS

6.1. Switching Between Computers

The Camgeet KVM switch offers two methods for switching between connected computers:

1. **Front Panel Button:** Press the "Switch" button on the front panel of the KVM device. The LED indicators will change to show which computer is currently active.
2. **Wired Remote Control:** Press the button on the wired remote control. This provides a convenient way to switch computers from your desk without reaching for the KVM unit.

Ultra-fast USB 3.0 Data Transfer Rates Up to 5Gb/s (10 Times Faster Than USB 2.0)

4 USB3.0 ports for USB devices

Image: Two methods of switching between computers: directly pressing the button on the KVM switch or using the included wired remote control.

6.2. Display Modes (Extended/Mirrored)

The KVM switch supports both extended and mirrored display modes for your monitors. The configuration is managed by your computer's operating system.

For Windows OS: Press **"Window + P"** on your keyboard. A small window will appear, allowing you to choose between "Duplicate" (Mirrored) or "Extend" (Extended) display modes.

For Mac OS: Mac systems typically support extended mode for two different screens. However, some configurations may only allow two identical screens (mirrored) depending on the specific Mac model and software version. Adjust display settings in System Preferences.

6.3. USB 3.0 Port Usage

The KVM switch includes four USB 3.0 ports (three USB-A and one USB-C) for connecting peripherals. These ports support data transfer speeds up to 5Gbps, making them suitable for keyboards, mice, printers, scanners, and USB storage devices.

8K Ultra HD Enjoyment

Single monitor output up to 8K@30Hz, 4K@144Hz

Simultaneous output of dual monitors up to 4K@100Hz

Note: Please be sure to use 8K DP1.4 cable at the input end to obtain higher resolution.

Image: A close-up view of the KVM switch highlighting the USB 3.0 ports, indicating ultra-fast data transfer rates up to 5Gbps, which is 10 times faster than USB 2.0.

7. MAINTENANCE

- Keep the KVM switch in a dry, well-ventilated area, away from direct sunlight and heat sources.
- Clean the device with a soft, dry cloth. Do not use liquid or aerosol cleaners.
- Avoid placing heavy objects on the KVM switch.
- When not in use for extended periods, you can use the ON-OFF switch to power down the device.

8. TROUBLESHOOTING

If you encounter issues with your Camgeet KVM switch, please refer to the following common solutions:

- **No Display/Flickering Screen:**

- Ensure all DisplayPort and HDMI cables are securely connected to both the KVM switch and your monitors/computers.
- Verify that the correct input source is selected on your monitors.
- Check if the KVM switch is properly powered. If using high-power USB devices, ensure an external 5V power adapter is connected.
- Try restarting the KVM switch by cycling its power using the ON-OFF switch.
- Ensure your computer's graphics drivers are up to date.
- If experiencing issues with multiple screens on Linux, try plugging the desktop directly into the screen first, then through the KVM switch.

- **Keyboard/Mouse Not Responding:**

- Ensure the USB 3.0 cables from your computers to the KVM switch are securely connected.
- Try connecting the keyboard/mouse to a different USB port on the KVM switch.
- If using a high-power keyboard, ensure the KVM switch is powered by an external 5V adapter.
- Some specialized gaming keyboards or mice may require direct connection to the computer or may have specific power requirements that exceed the KVM's capabilities.
- Restart the KVM switch and the connected computers.

- **Switching Issues:**

- Ensure the wired remote is properly connected.
- Check the LED indicators on the KVM switch to confirm which computer is active.
- Allow a few seconds for the operating system to detect and configure the displays after switching.

- **Resolution/Refresh Rate Limitations:**

- Ensure all DisplayPort cables are DP1.4 compliant and of high quality, especially for 4K@100Hz or 8K@30Hz resolutions.
- Verify that your graphics card and monitors support the desired resolution and refresh rate.
- Note that 1440p resolution may be limited to 144Hz.
