## SETUP AND ASSEMBLY INSTRUCTIONS

Assembly of the Yaheetech Simple Metal Bed Frame is designed to be straightforward and can typically be completed within an hour. It is recommended to assemble the bed frame with two people.

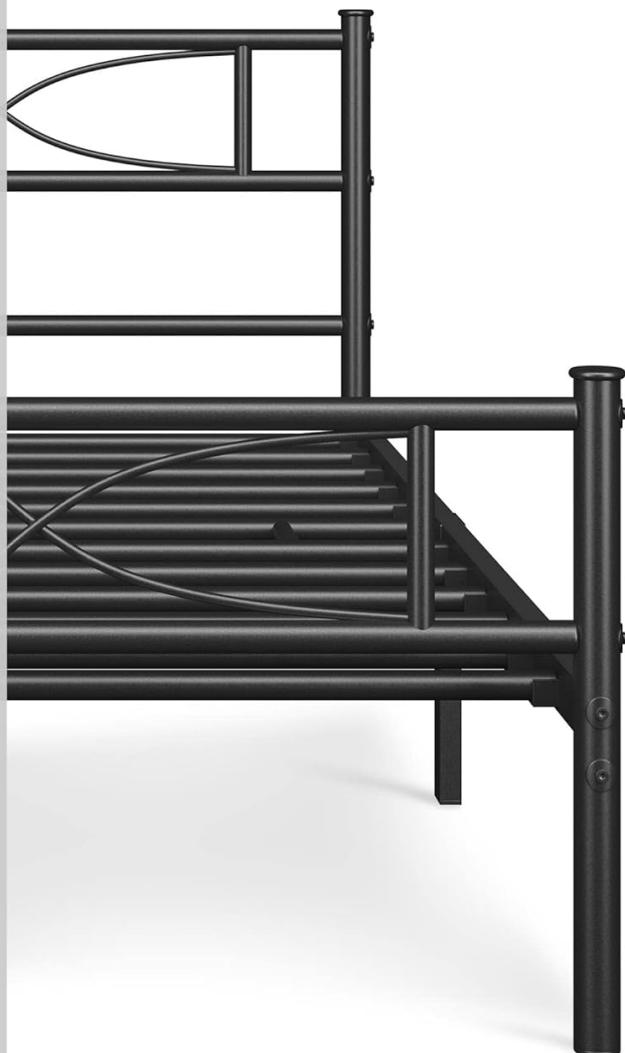

1. **Prepare the Area:** Clear a spacious area for assembly. Lay out all components on a soft, clean surface to prevent scratches.
2. **Assemble Headboard and Footboard:** Connect the horizontal bars to the vertical posts of both the headboard and footboard using the provided hardware. Ensure all connections are finger-tight at this stage.
3. **Attach Side Rails:** Connect the side rails to the assembled headboard and footboard. Align the holes and insert the bolts, securing them loosely.
4. **Install Support Legs:** Attach any central or additional support legs to the frame as indicated in the diagram. These legs provide crucial stability.
5. **Insert Metal Slats:** Carefully place the metal slats into the designated slots or notches on the side rails. Ensure each slat is fully seated and secured. Some slats may require a firm press to lock into place.

Aim the metal pipe at the notch

Press hard and fix

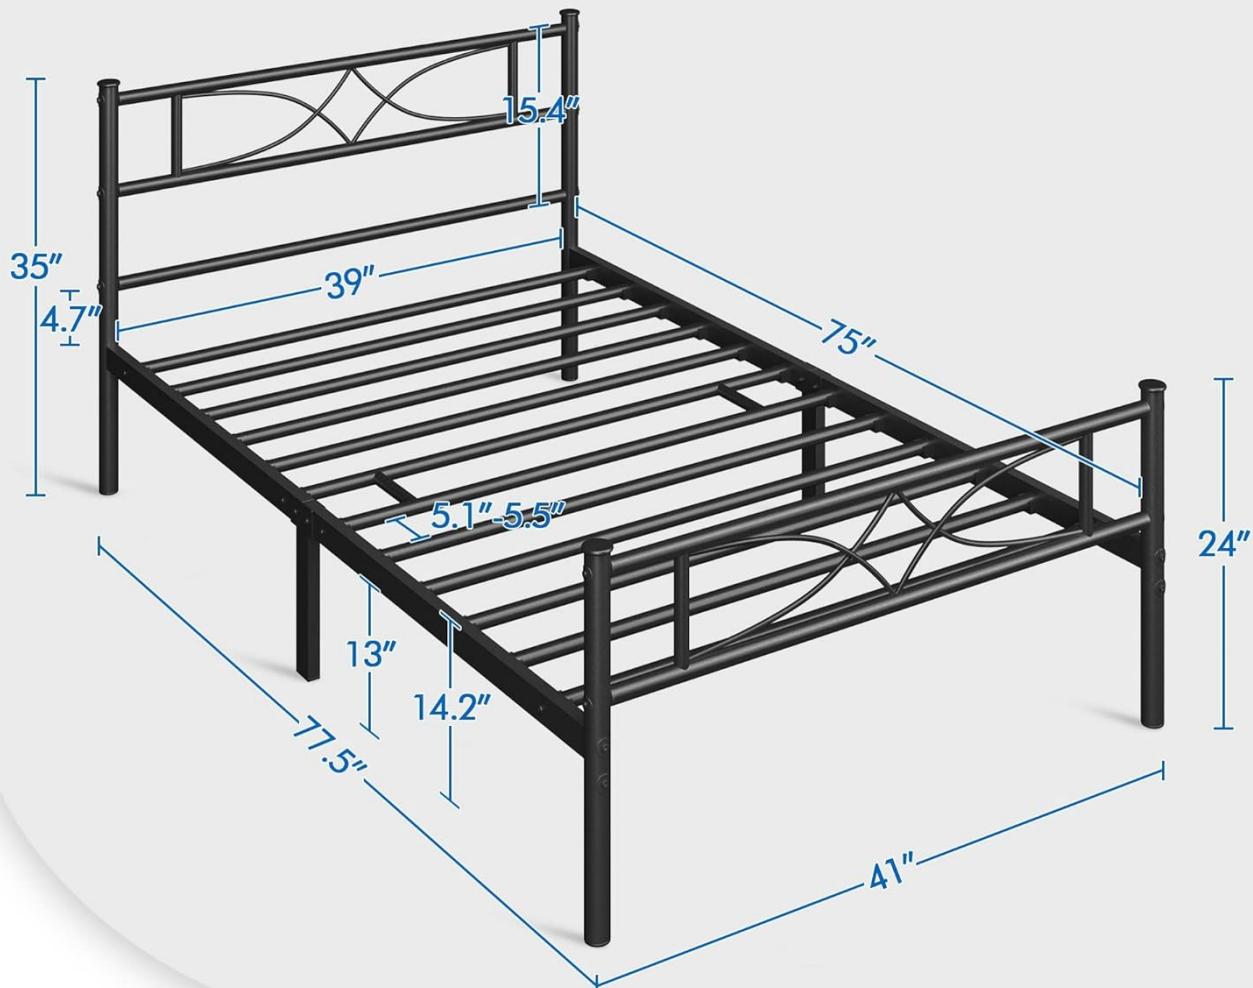

Properly align and secure the metal slats by aiming the pipe at the notch and pressing firmly.

The built-in slats are designed to prevent your mattress from sliding.

6. **Final Tightening:** Once all components are in place, systematically tighten all bolts with the provided Allen wrench. Ensure all connections are firm and secure, but do not overtighten.

Problem	Possible Cause	Solution
Bed frame wobbles or is unstable.	Loose bolts or improper assembly.	Ensure all bolts are securely tightened. Recheck assembly steps to confirm correct installation of all parts.
Squeaking noises.	Loose connections or friction between metal parts.	Tighten all bolts. Apply a small amount of lubricant (e.g., silicone spray) to connection points if squeaking persists.
