3. Safety Information

Important Safety Precautions:

- **Weight Limit:** Do not exceed a maximum weight of **40 pounds (18 kg)** per shelf. Overloading can cause the shelves to detach from the wall, leading to injury or damage.
- **Proper Mounting:** Ensure the shelves are securely mounted to a sturdy wall surface using appropriate hardware. If mounting into drywall, use wall anchors. For wood studs, screws can be directly driven.
- **Level Installation:** Always use a level tool to ensure shelves are installed horizontally to prevent items from sliding off.
- **Children and Pets:** Keep small parts and packaging materials away from children and pets during assembly.

4. Setup and Installation

Tools Required (Not Included):

- Drill
- Phillips Head Screwdriver
- Pencil
- Measuring Tape
- Level Tool

Assembly Steps:

1. **Attach Brackets to Shelf Boards:** For each wood shelf board, align two L-shaped metal brackets to the underside of the board. Ensure the longer arm of the 'L' shape is flush with the back edge of the shelf and the shorter arm extends underneath. Use the provided screws to secure the brackets to the wood. There are no pre-drilled holes, so careful alignment is necessary.

2. **Mark Wall Positions:** Determine the desired location for your shelf on the wall. Use a pencil and a level tool to mark the positions for the screw holes on the wall, aligning with the holes on the L-shaped brackets.
3. **Drill Pilot Holes:** Using a drill, create pilot holes at the marked positions. If installing into drywall, insert the provided wall anchors into the pilot holes. If drilling into wood studs, anchors may not be necessary.
4. **Mount Shelves to Wall:** Align the holes on the brackets with the drilled holes (or anchors) on the wall. Insert and tighten the screws through the brackets into the wall until the shelf is firmly secured. Ensure the shelf is level before fully tightening all screws.
