DrunkDeer A75 ANSI

DrunkDeer A75 Rapid Trigger Mechanical Keyboard User Manual

Model: A75 ANSI

Brand: DrunkDeer

INTRODUCTION

This manual provides detailed instructions for the setup, operation, maintenance, and troubleshooting of your DrunkDeer A75 Rapid Trigger Mechanical Keyboard. The A75 features magnetic switches, adjustable actuation, Rapid Trigger technology, and durable PBT keycaps, designed for enhanced gaming and typing performance.

SETUP

Package Contents

- DrunkDeer A75 Mechanical Keyboard
- USB Cable
- User Manual (this document)

Connecting the Keyboard

1. Connect the provided USB-C cable to the USB-C port on the keyboard.
2. Connect the other end of the USB cable to an available USB port on your computer.
3. The keyboard will automatically be recognized by your operating system.

Important Firmware Information

Warning: Ensure you have the A75 ANSI model and download the correct firmware from the official DrunkDeer website. Installing incorrect firmware can cause hardware problems. If you encounter any issues, contact DrunkDeer customer support.

OPERATING INSTRUCTIONS

Adjustable Actuation Distance

The DrunkDeer A75 features magnetic switches that allow for adjustable actuation distance from 0.2mm to 3.8mm, with a precision of 0.1mm. This allows you to customize how deep a key needs to be pressed before it registers an input.

Figure 1: Adjustable Actuation Distance. This image illustrates the range of adjustable actuation from 0.2mm to 3.8mm, with a sensitivity of 0.1mm.

Rapid Trigger Function

Rapid Trigger allows a key to be triggered once pressed and reset once released. The sensitivity range is 0.1-3.6mm, with an adjustable accuracy of 0.1mm. This feature enables mid-motion repeats without locking in actuation points, providing a competitive edge in fast-paced games like Valorant or osu!.

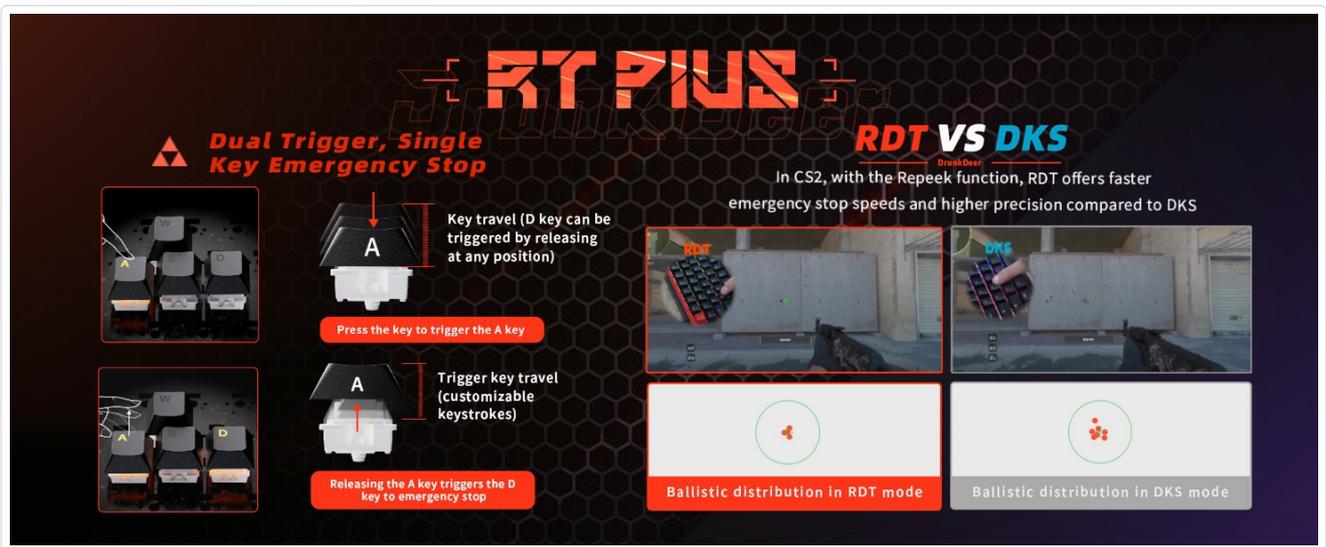

Figure 2: Release Dual Trigger (RDT) vs. Dynamic Keystrokes (DKS). This diagram explains how RDT offers faster emergency stop speeds and higher precision compared to DKS in games like CS2.

Your browser does not support the video tag.

Video 1: Demonstration of RT Plus - Last Win Mode. This video shows how the keyboard prioritizes the last keystroke, allowing for instant changes in direction during intense gaming moments.

Last Win Mode

With Last Win Mode, the keyboard prioritizes your last keystroke. When opposite directions are pressed, it allows you to change directions instantly without stopping, especially during intense moments. This feature, combined with Rapid Trigger, resolves key conflict issues and improves character movement responsiveness.

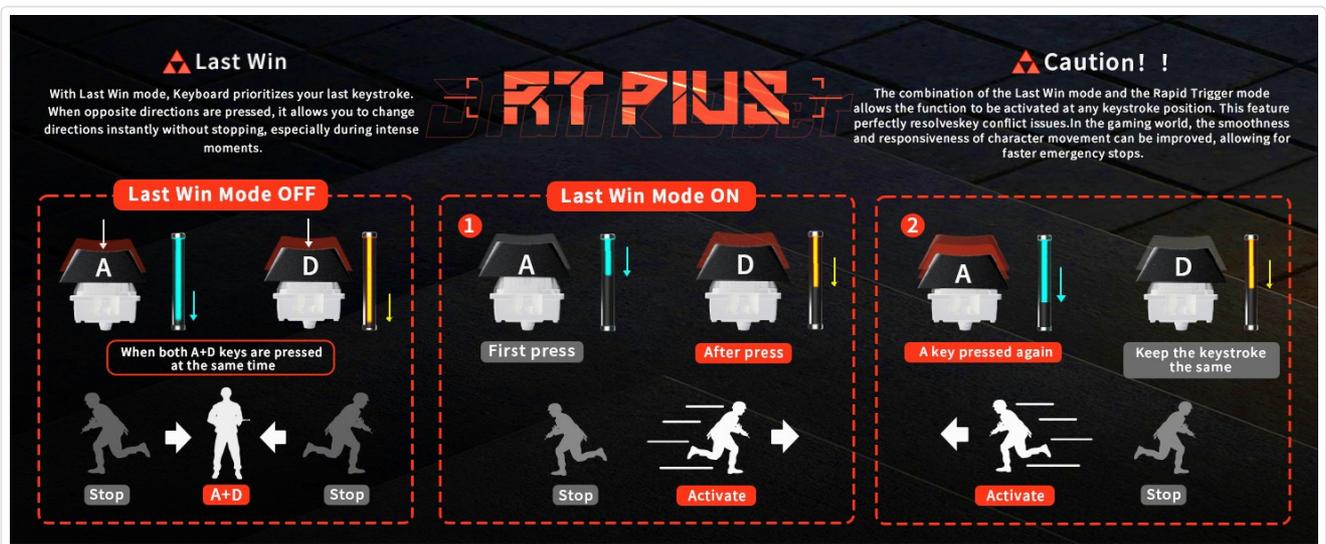

Figure 3: Last Win Mode. This diagram illustrates the difference between Last Win Mode OFF and ON, showing how the keyboard handles simultaneous opposite key presses.

Web Driver Software

The DrunkDeer A75 utilizes a self-developed web driver for convenient operation and customization. This allows you to adjust actuation points, Rapid Trigger settings, and RGB lighting effects. Settings are saved directly to the keyboard's onboard memory, ensuring your preferences are retained across different devices.

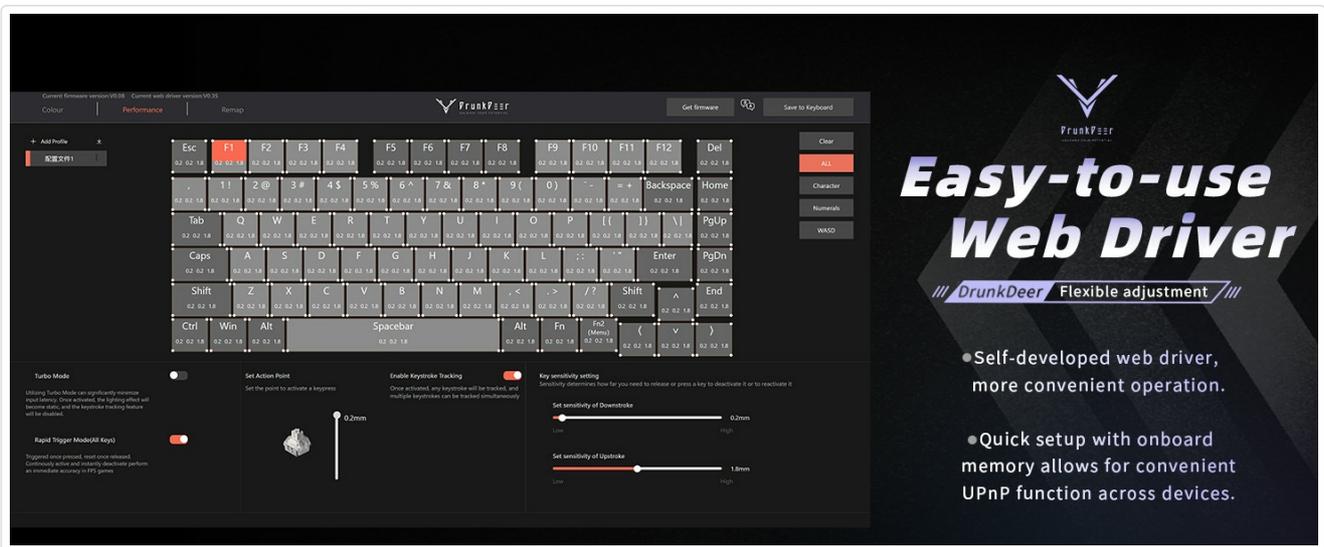

Figure 4: DrunkDeer A75 Web Driver Interface. This image displays the web-based software for customizing keyboard settings, including actuation points and key sensitivity.

RGB Lighting Effects

The keyboard features RGB backlighting with 18 different light effects and 10 levels of adjustable brightness. You can also customize single key RGB lamp effects to personalize your setup.

Video 2: A75-RGB Lighting Demonstration. This video highlights the dynamic RGB lighting effects of the DrunkDeer A75 keyboard.

Volume Adjust Knob

The keyboard includes a multi-function aluminum knob located on the top right. This knob can be used to adjust the system volume. Pressing the knob can also serve as a media play/pause or mute function, depending on your

system settings.

KEY FEATURES

Magnetic Switches (Hall Effect)

The A75 uses magnetic switches, also known as Hall effect switches. These switches operate through magnetic flux, eliminating physical contact points found in traditional mechanical switches. This design contributes to a keystriking life of 100 million presses, which is twice as long as conventional switches.

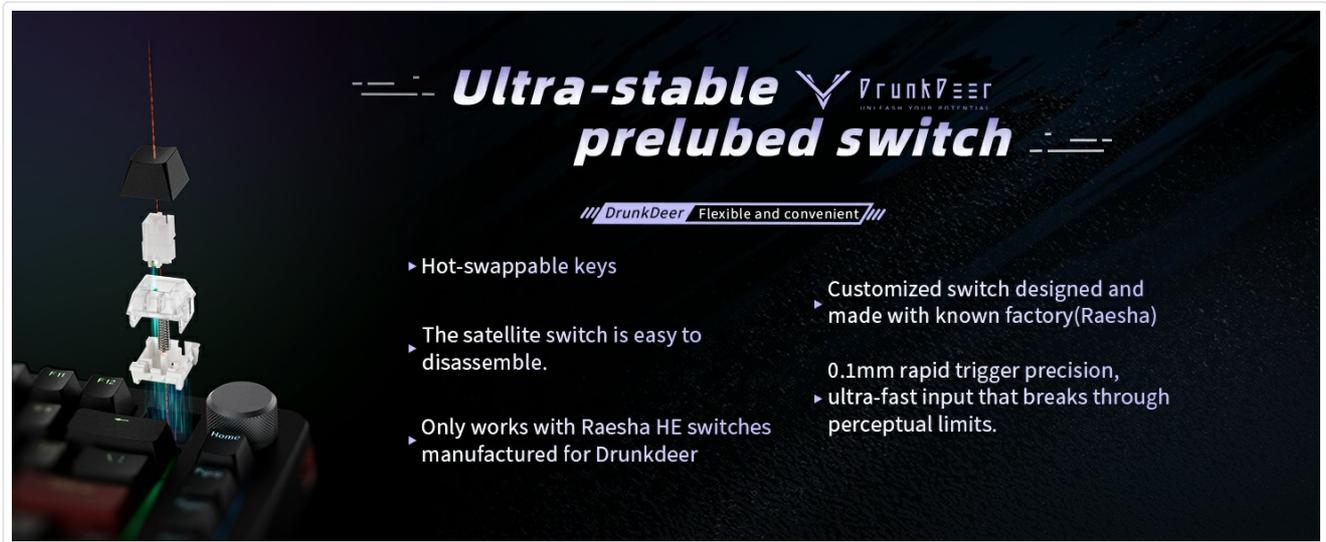

Figure 6: Magnetic Switch Mechanism. This image illustrates the internal workings of a magnetic switch, highlighting the magnetic flux detection.

Your browser does not support the video tag.

Video 3: Automatic Calibration Algorithm Function. This video explains how the keyboard's automatic calibration algorithm compensates for magnetic flux decrease and installation tolerances, ensuring consistent performance over time.

PBT Keycaps

The keyboard is equipped with thick secondary injection molded PBT keycaps. These keycaps are durable, resistant to dirt, less prone to becoming oily over time, and provide a comfortable tactile feel. They feature an OEM profile, ergonomically designed to reduce hand fatigue during extended typing or gaming sessions.

PBT keycaps

+ Thick secondary injection molded

- + Durable, dirt-resistant, not easy to be oily, comfortable touch feeling
- + Simple design, vibrant color, and good shine-through effect.
- + Create your own desktop aesthetics

75% Layout

The A75 features a compact 75% layout, which includes 82 keys. This layout retains essential keys like the function row and arrow keys while offering a smaller footprint compared to full-size keyboards, optimizing desk space without sacrificing critical functionality.

MAINTENANCE

Cleaning the Keyboard

- Use a soft, lint-free cloth to wipe down the keycaps and chassis.
- For deeper cleaning, you may carefully remove keycaps using a keycap puller (not included) and use compressed air to clear debris from beneath the keys.
- Avoid using harsh chemicals or abrasive materials, as these can damage the keyboard's finish or keycap legends.

Switch Maintenance

The magnetic switches are designed for longevity. If you have the hot-swappable version, switches can be carefully removed and replaced. Note that only Raesha HE switches manufactured for DrunkDeer are compatible.

TROUBLESHOOTING

Keyboard Not Responding

- Ensure the USB cable is securely connected to both the keyboard and your computer.
- Try connecting the keyboard to a different USB port on your computer.
- Test the keyboard on another computer to determine if the issue is with the keyboard or the computer.

Incorrect Key Actuation or Rapid Trigger Behavior

- Verify that you have installed the correct firmware for your A75 ANSI model.
- Access the web driver software to check and adjust your actuation and rapid trigger settings. Ensure profiles are correctly loaded.
- If issues persist, perform an automatic calibration through the web driver software.

RGB Lighting Issues

- Check the RGB settings in the web driver software.
- Ensure brightness levels are set appropriately.
- Try cycling through different lighting effects to see if the issue is specific to one mode.

SPECIFICATIONS

Feature	Detail
Model Number	A75 ANSI
Layout	75% (82-Key)
Switch Type	Magnetic (Hall Effect)
Actuation Distance	Adjustable 0.2mm to 3.8mm (0.1mm precision)
Rapid Trigger Sensitivity	0.1mm to 3.6mm (0.1mm accuracy)
Keycap Material	PBT Double Shot (OEM Profile)
Connectivity	USB-C Wired
Backlighting	RGB (18 effects, 10 brightness levels)
Dimensions	5.2 x 2.17 x 0.45 inches
Weight	2.53 pounds
Compatible Devices	PC

WARRANTY AND SUPPORT

For warranty information and technical support, please visit the official DrunkDeer website or contact their customer service directly. Ensure you have your product model number (A75 ANSI) and purchase details available when seeking support.
