TROUBLESHOOTING

This section provides solutions to common issues you might encounter.

Problem	Possible Cause	Solution
NAS not powering on.	Power cable loose, power adapter faulty, power outlet issue.	Check all power connections. Try a different power outlet. Ensure the power adapter is functioning.
Cannot find NAS on network.	Network cable disconnected, incorrect IP settings, firewall blocking.	Verify LAN cable connection. Use ASUSTOR Control Center to locate the NAS. Temporarily disable firewall on your computer. Ensure NAS and computer are on the same network segment.
Slow file transfer speeds.	Network congestion, faulty cable, drive performance issues, network adapter settings.	Check network cable integrity. Ensure your network infrastructure (router, switch) supports 2.5GbE. Verify drive health in Storage Manager. Disable Jumbo Frames if not supported by all devices.
Hard drive LED blinking red.	Drive failure, bad sectors, RAID degradation.	Check <i>Storage Manager</i> for detailed drive status. If a drive has failed, replace it and repair the RAID volume. Back up critical data immediately.
Forgot ADM password.	Password forgotten.	Use the reset button on the rear panel (refer to manual for specific reset procedure, usually a 3-second press for network settings reset, 10-second for factory reset without data loss).
