CALANDIS CLTIN77004055

CALANDIS TSA 002 3-Digit Combination Luggage Lock User Manual

Model: CLTIN77004055 | Brand: CALANDIS

Introduction

Thank you for choosing the CALANDIS TSA 002 3-Digit Combination Luggage Lock. This lock is designed to provide security for your luggage while allowing airport security personnel (TSA) to inspect your bags without damaging the lock or your belongings. Please read this manual carefully to understand how to set your personal combination and operate the lock correctly.

Product Overview

Features:

- TSA 002 Approved: Allows airport screeners to unlock, inspect, and relock bags without damage.
- 3-Digit Resettable Combination: Set your own unique code for enhanced security.
- Durable Construction: Made from Acrylonitrile Butadiene Styrene (ABS) and Metal.
- Lightweight and Portable: Ideal for various travel bags and suitcases.

What's in the Box:

- 1 Piece TSA 002 Combination Padlock
- 2 Pieces Screws
- 1 Piece Plastic Plate
- 1 Piece User Manual (this document)

Image: Two small screws, typically used for mounting the lock onto luggage.

Setup: Setting Your Combination

The original combination for your lock is set to **0-0-0**. Follow these steps to set your personal combination:

1. Ensure the lock is set to the default combination **0-0-0**.
2. Pull the shackle (the U-shaped metal part) upwards to open the lock.
3. Locate the small reset button or lever on the side or bottom of the lock. This is often a small, recessed button that requires a pen or a pointed object to press.
4. While the lock is open, press and hold the reset button/lever.
5. With the button/lever held, rotate the three number dials to your desired personal combination. Choose a memorable but secure combination.
6. Release the reset button/lever. Your new combination is now set.
7. Scramble the dials to lock the shackle back into place. Test your new combination to ensure it opens the lock correctly.

Operating Instructions

To Open the Lock:

1. Dial your personal 3-digit combination to align with the convex line on the lock body.
2. Pull the shackle upwards to release it from the lock body.

To Close and Secure the Lock:

1. Insert the shackle back into the lock body.
2. Scramble the number dials to a random combination. This will secure the shackle and prevent unauthorized opening.

Maintenance

- Keep the lock clean and free from dirt or debris that could obstruct the dials or shackle mechanism.
- Avoid using harsh chemicals or abrasive cleaners, which can damage the lock's finish or internal components.
- If the dials become stiff, a small amount of graphite powder or a silicone-based lubricant can be applied to improve movement.
- Store the lock in a dry environment when not in use.

Troubleshooting

Cannot Open the Lock:

- **Incorrect Combination:** Ensure you have dialed the correct 3-digit combination. Double-check each number.
- **Dials Not Aligned:** Make sure each number is perfectly centered in its window and aligned with the convex line.

- **Shackle Stuck:** Check for any foreign objects or debris preventing the shackle from releasing. Gently wiggle the shackle while applying the correct combination.

Forgot Combination:

Unfortunately, if you forget your combination, there is no master key or override function for this type of lock. You will need to try all possible combinations (000 to 999) until the lock opens. This process can be time-consuming but is the only method to regain access without damaging the lock.

Specifications

Brand	CALANDIS
Model Name	CLTIN77004055
Lock Type	Combination Lock
Special Feature	PIN Lock (3-Digit Combination)
Material	Acrylonitrile Butadiene Styrene, Metal
