MAINTENANCE

Proper maintenance will extend the life of your bed frame.

- **Cleaning:** Wipe the metal frame with a damp cloth and mild detergent. Dry immediately. For the wooden headboard and slats, use a dry or slightly damp cloth. Avoid harsh chemicals.
- **Storage:** If disassembling for storage, it is best to use the original packaging to protect components. Store in a cool and dry place.
- **Hardware Check:** Periodically inspect all bolts and connections to ensure they remain tight. Re-tighten if necessary.

TROUBLESHOOTING

If you encounter any issues, refer to the following common solutions:

- **Wobbling or Instability:** Ensure all bolts are securely tightened. Check that the bed frame is on a level surface. Verify that all support legs are making firm contact with the floor.
- **Squeaking Noises:** Re-tighten all hardware. Ensure slats are properly seated and the Velcro is fully

engaged. The anti-noise design with Velcro should minimize squeaking.

- **Mattress Sliding:** Confirm that the anti-slip strips on the slats are uncovered and making contact with the mattress.
