OPERATING INSTRUCTIONS

The INFANS Ride-on Push Car offers three modes of operation to adapt to your child's growth and development:

1. Stroller Mode (18-24 Months)

In this mode, the car functions as a comfortable stroller, allowing parents to push and steer the child. The safety bar and footrest provide maximum security.

- Ensure the detachable safety guardrail and footrest are securely attached.
- The removable push handle should be fully extended and locked into place.
- Parents can control the direction using the push handle. The detachable steering wheel allows for parent control of direction.

2. Walking Car Mode (24-36 Months)

As your child begins to walk, this mode allows them to push the car themselves, aiding in balance and coordination. The safety bar can be removed if desired.

- The push handle can remain attached for parental assistance or removed for independent walking.
- The child can use the car as a support to push themselves forward.

3. Ride-on Car Mode (36-60 Months)

For older children, this mode allows them to sit and propel themselves using their feet, fostering independence and motor skills. The safety bar and push handle are typically removed for this mode.

- Remove the safety guardrail and push handle.
- The child sits on the seat and uses their feet to push the car forward.
- The steering wheel allows the child to control direction.
