TROUBLESHOOTING

- **Device not charging or turning on:** Ensure the charging cable is securely connected to both the device and the power source. Try a different USB cable or power adapter. If the issue persists, contact customer support.
- **Offline translation accuracy is low:** Offline translation relies on pre-downloaded language packs and may not be as nuanced as online translation. Ensure you have downloaded the latest language packs. For critical translations, connect to Wi-Fi.
- **Poor Wi-Fi signal or connection issues:** Move closer to your Wi-Fi router. Ensure the Wi-Fi password is entered correctly. Restart the device and your Wi-Fi router.
- **Difficulty with voice translation buttons:** The device has dedicated buttons for each language in two-way translation mode. Ensure you are pressing the correct button corresponding to the language being spoken. Familiarity with the interface will improve ease of use.
- **Photo translation issues (grammar/syntax):** While photo translation is highly effective, translating complex or lengthy texts may sometimes result in minor grammatical or syntactical imperfections. It is best suited for shorter phrases, signs, or menus. Ensure the text is clear, well-lit, and not too small.
- **Need to know source language for voice translation:** The device requires you to select the source language before initiating voice translation. It does not automatically detect the spoken language.
