TROUBLESHOOTING

If you encounter issues with your TV, refer to the following common solutions:

Problem	Solution
No Power	Ensure the power cord is securely plugged into both the TV and a working electrical outlet. Try a different outlet.
No Picture/Sound	Check all cable connections (HDMI, AV, etc.) to external devices. Ensure the correct input source is selected on the TV.
Cannot find correct input for DVD/external device (e.g., labeled "Roku" instead of "AV")	Navigate to the input selection on the home screen. Select the input that corresponds to your connected device. If the label is incorrect (e.g., "Roku" for an AV input), you can rename it in the TV's settings menu for easier identification.
Remote Control Not Working	Replace the batteries in the remote control. Ensure there are no obstructions between the remote and the TV's IR sensor.
Wi-Fi Connection Issues	Restart your Wi-Fi router. Go to the TV's network settings and try reconnecting to your Wi-Fi network.
