- The PVC hand shower hose is designed to be twist-resistant, ensuring better durability and preventing tangles.

Troubleshooting

This section provides solutions to common issues you might encounter with your shower system.

Problem	Possible Cause	Solution
Low water pressure from showerheads.	Clogged nozzles or mineral buildup.	Clean the anti-limescale nozzles by wiping them with your fingers. If persistent, remove showerheads and soak in a descaling solution.
Water leaking from connections.	Loose connections or worn seals.	Ensure all connections are tightened properly. Check and replace any damaged rubber seals or washers.
Difficulty switching between shower functions.	Diverter mechanism is stiff or obstructed.	Ensure no debris is obstructing the diverter. If stiffness persists, consult a qualified plumber.
