7. Troubleshooting

If you encounter issues with your Aramox Portable Electric Cooler Box, refer to the following common problems and solutions:

Problem	Possible Cause	Solution
Unit does not turn on.	No power supply; USB cable not properly connected; Switch is in "O" (off) position.	Ensure USB cable is securely plugged into a working USB port. Check the inline switch is in "I" or "II" position. Try a different USB power source.
Cooling/Warming not effective.	Vents blocked; Unit overloaded; Ambient temperature too high/low; Items not pre-chilled/heated.	Ensure vents are clear. Do not overfill the unit. Note that performance is affected by ambient temperature. For best results, use with pre-chilled or pre-heated items.
