TROUBLESHOOTING

Problem	Possible Cause	Solution
Remote not charging.	Loose connection, incompatible power source, damaged cable/remote port.	Ensure both ends of the cable are securely connected. Try a different USB power source. Check the remote's charging port for debris. Inspect the cable for visible damage.
Slow charging.	Low power output from source, using a non-optimal USB port.	Use a wall adapter with sufficient power output (e.g., 5V/1A or higher). Ensure you are using a USB 2.0 compatible port.
Data transfer not working.	Incorrect connection, device not recognizing cable, remote not in data transfer mode.	Ensure the cable is connected to a data-enabled USB port on your computer. Check your remote's manual for instructions on enabling data transfer mode.
