5. MAINTENANCE

5.1. Cleaning the Camera and Lens

- **Camera Body:** Use a soft, dry cloth to wipe the camera body. For stubborn dirt, a slightly dampened cloth can be used, followed by a dry cloth. Avoid harsh chemicals.
- **Lens:** Use a lens brush or blower to remove dust. For smudges, use a specialized lens cleaning solution and a microfiber cloth. Clean gently in a circular motion from the center outwards.
- **Sensor:** Sensor cleaning should be performed with extreme care. For best results, consider professional sensor cleaning services. The included cleaning kit can assist with external cleaning.

FOR IMMEDIATE RELEASE

Ricoh announces the PENTAX K-1 Mark II full-frame digital SLR camera

Flagship model in the PENTAX K series camera line updated to deliver even higher in-image quality and enhanced performance in challenging shooting conditions

WEST CALDWELL, NJ, February 21, 2018 Ricoh Imaging Americas Corporation today announced the PENTAX K-1 Mark II 35mm full-frame digital SLR (DSLR) camera. Developed as the successor to the PENTAX K-1 full-frame DSLR camera launched in April 2016, the compact, rugged and weather-resistant PENTAX K-1 Mark II now becomes the flagship camera in the acclaimed PENTAX in-series lineup. The camera incorporates new technologies that allow to deliver outstanding image quality and improved operability in a broader range of shooting conditions.

The PENTAX K-1 Mark II uses the same full-frame Anti-aliasing (AA) filterless CMOS sensor with 36.5 effective megapixels as its predecessor model; however, Ricoh has added a new accelerator with to the PENTAX K-1 Mark II that—along with the camera's PRIME II image processing—enables it to produce high-resolution images with minimal noise in even the most challenging low-light conditions, up to ISO 819200. This makes the new camera ideal for low-light photography where higher shutter speeds are required.

The camera also incorporates Ricoh's Shift Resolution System II. The new, PENTAX-developed technology uses the same in-camera shake-reduction (SR) mechanism and sensor-shift capabilities as the original Shift Resolution System found in the PENTAX K-1, which captures four images of the same scene, and then synthesizes them into a single, super-high-resolution composite image. With the Shift Resolution System II, the camera also retains 10-bit color data, resulting in images with significantly finer details and true colors than those produced by typical full-frame sensors.

A new feature in the Shift Resolution System II is Dynamic Shift Resolution mode. This mode allows photographers to produce only, ultra-high pixel-RF-resolution images without the need of a tripod, extending the camera's use to a wider variety of subjects and scenes.

The PENTAX K-1 Mark II also a camera equipped with many unique features and functions designed to facilitate usability and ease of operation, and that have become the hallmark of PENTAX cameras. These include a sturdy magnesium alloy body with dustproof/weather-resistant construction, an optical viewfinder with a nearly 100-percent field of view for real-time subject confirmation, Active Trace, which simplifies the tracking and photography of aerials; features by enabling DFT data with the camera's sophisticated DSR mechanism; and a flexible Wi-Fi/LCD module to accommodate various shooting angles.
