## 4. INSTALLATION GUIDE

Follow these steps carefully for a secure and proper installation of your Cumbor Retractable Baby Gate. Tools required: Drill, Phillips head screwdriver, measuring tape, pencil.

- Determine Mounting Location:** Choose a flat, stable surface for mounting. The gate can be installed inside a doorway opening or on the wall outside the opening. Ensure there are no obstructions to the gate's retraction.
- Position Wall Guides:** Use the provided wall guides to mark the drilling points. The main gate unit (retracting side) should be installed on one side, and the latch units on the opposite side. Ensure the main gate unit is installed

vertically.

3. **Mark Drilling Points:** Hold the wall guides in place and use a pencil to mark the screw holes. For drywall installation, it is crucial to anchor screws into a wall stud for maximum security. Do not install on metal surfaces.
4. **Drill Pilot Holes:** Drill pilot holes at the marked points. The size of the drill bit should be appropriate for the wall anchors provided.
5. **Insert Wall Anchors:** Gently tap the wall anchors into the pilot holes until they are flush with the wall surface.
6. **Attach Brackets:** Secure the Upper and Lower Brackets for the main gate unit, and the two Latches for the receiving side, to the wall using the provided screws.
7. **Mount the Gate:** Slide the main gate unit onto its mounted brackets. Ensure it clicks securely into place.
8. **Test Operation:** Once installed, gently pull the mesh across to the latch side and engage the latch. Ensure the gate extends smoothly and locks securely.
