Setup and Installation

The SENSEA Easy Bathtub Shower System is designed for wall-mounted installation in a bathtub. Follow these steps for proper

setup:

1. **Preparation:** Turn off the main water supply to your bathroom. Clear the installation area.
2. **Positioning:** Ensure that the water connections on the wall are at least 15 cm (approximately 6 inches) away from the edge of the bathtub. This clearance is necessary for the swivel spout. The column is height-adjustable to fit existing holes.
3. **Mounting:** Mark the drilling points on the wall according to the provided template or measurements. Drill holes and insert the appropriate wall plugs. Note that the included wall plugs are for concrete; verify suitability for your wall material.
4. **Connecting Water Lines:** Connect the hot and cold water lines to the mixer tap. Ensure all connections are tight and leak-free.
5. **Assembling the Column:** Attach the main shower column to the wall mounts. Secure it firmly.
6. **Attaching Shower Heads:** Install the overhead shower and connect the hand shower hose to the mixer and the hand shower.
7. **Final Checks:** Turn on the main water supply and check for any leaks. Test the functionality of the mixer, spout, overhead shower, and hand shower.

- **General Cleaning:** After each use, wipe the product with a soft cloth to maintain its effectiveness and shine.
- **Cleaning Agents:** Clean the system with a mild soap solution. **Avoid** using abrasive, acidic, or chlorine-based household products, as these can damage the chrome finish and materials.
- **Hose Care:** The PVC hand shower hose is designed to resist twisting, ensuring better durability. Periodically check the hose for any signs of wear or damage.

Troubleshooting

If you encounter any issues with your SENSEA Easy Bathtub Shower System, refer to the following common problems and solutions:

Problem	Possible Cause	Solution
Low water pressure	Clogged nozzles; partially closed water supply; general household water pressure issue.	Clean the anti-limescale nozzles by wiping them. Ensure water supply valves are fully open. Consult a plumber if household pressure is consistently low.
Leaks from connections	Loose connections; damaged seals/washers.	Turn off water supply. Tighten connections. Replace worn or damaged washers/seals.
Difficulty switching between spray modes	Mineral buildup in hand shower mechanism.	Soak the hand shower head in a descaling solution (e.g., vinegar and water) if mineral buildup is suspected. Rinse thoroughly.
Diverter not working properly	Internal mechanism obstruction or wear.	Ensure no debris is obstructing the diverter. If the issue persists, professional assistance may be required.

If the problem persists after attempting these solutions, please contact customer support.
