

Baby Hug Pro Bubble Care Premium Pant Style Diapers XL

Baby Hug Pro Bubble Care Premium Pant Style Diapers XL User Manual

Model: Pro Bubble Care Premium Pant Style Diapers XL

1. INTRODUCTION

This manual provides instructions for the proper use and care of Baby Hug Pro Bubble Care Premium Pant Style Diapers, Extra Large size. These diapers are designed for comfort and dryness, featuring a silky soft and breathable material, bubble layer technology for quick absorption, and shea butter for skin protection.

Key features include:

- **Silky Soft & Breathable Material:** Designed for your baby's delicate skin.
- **Bubble Layer Technology:** Ensures quick absorption and up to 12 hours of dryness.
- **Shea Butter Enriched:** Helps protect and moisturize the baby's skin.
- **Flexible Waistband:** Provides a comfortable and secure fit.
- **Leak Guard:** Prevents potential leakage.
- **Wetness Indicator:** Changes color from yellow to blue, signaling when a diaper change is needed.
- **Dermatologically Tested:** Ensures safety for sensitive skin.

2. PREPARATION FOR USE

Baby Hug Pro Bubble Care Premium Pant Style Diapers are ready for immediate use directly from the package. No special preparation is required before application.

Ensure you have the correct size for your baby. The Extra Large (XL) size is suitable for babies weighing 12-17 kg.

Image 1: Baby Hug Pro Bubble Care Premium Pant Style Diapers XL packaging, showing key features like 12 hours dryness, silky soft material, shea butter, and wetness indicator. The packaging also indicates XL size for 12-17 kg and 19 pieces.

3. OPERATING INSTRUCTIONS (DIAPER APPLICATION AND CHANGE)

Follow these steps for effective diaper application and changing:

1. **Preparation:** Lay your baby on a clean, flat surface. Ensure you have fresh diapers, wipes, and any necessary creams within reach.
2. **Removal of Used Diaper:** Gently remove the soiled diaper. Clean your baby thoroughly with wipes.
3. **Application:** Slide the new pant-style diaper up your baby's legs, similar to underwear. Ensure the flexible waistband sits comfortably around your baby's waist. The leak guards should be positioned correctly around the thighs to prevent leakage.
4. **Check Fit:** Verify that the diaper is snug but not too tight, allowing for comfortable movement.
5. **Wetness Indicator:** The diaper features a wetness indicator that turns from yellow to blue when it's time for a change. It is recommended to change the diaper when the indicator turns blue, or approximately every 12 hours, whichever comes first.

Wetness Indicator

Wetness indicator which turns from Yellow to Blue when it may be time to change

Image 3: A baby lying on a soft white blanket, wearing a Baby Hug diaper, illustrating the silky soft material of the diaper for comfort.

4. MAINTENANCE AND DISPOSAL

These diapers are designed for single use. After use, roll up the soiled diaper and secure it with the disposal tape (if present) or by wrapping it tightly. Dispose of used diapers in a waste bin. Do not flush diapers down the toilet.

Store unused diapers in a cool, dry place, away from direct sunlight and moisture, to maintain their absorbency and integrity.

Shea Butter

It moisturizes and keeps your baby's skin happy and protected

Image 4: A happy baby crawling while wearing a Baby Hug diaper, illustrating the comfort and skin protection provided by the shea butter enrichment.

5. TROUBLESHOOTING

- **Leakage:**

Ensure the diaper is the correct size for your baby. Check that the leak guards are not tucked inwards and are properly positioned around the baby's thighs. A diaper that is too small or too large can lead to leaks. Ensure the flexible waistband is snug but not restrictive.

- **Skin Irritation:**

Although Baby Hug diapers are dermatologically tested and enriched with shea butter, some babies may still experience irritation. Ensure frequent diaper changes, especially when the wetness indicator turns blue. Clean and dry the baby's skin thoroughly during each change. Consult a pediatrician if irritation persists.

- **Wetness Indicator Not Changing Color:**

The wetness indicator changes from yellow to blue upon contact with moisture. If it does not change, verify that the diaper has been used. If the diaper is new and the indicator is already blue, it may indicate exposure to moisture during storage. Discard and use a fresh diaper.

Image 5: Magnified view of the diaper's interior, showcasing the Bubble Layer Technology designed for maximum air flow and quick absorption to keep skin dry.

Active Gel

Super Absorbent Polymer sheet makes the diapers ultra thin and light weight. The Active Gel rapidly converts liquid into gel keeping the baby's skin dry.
