OPERATING INSTRUCTIONS

Basic Key Functions

The Heayzoki Wired Gaming Keyboard features a standard 104-key QWERTY layout. All keys function as labeled. For special characters, use the **Shift** key in combination with the desired key.

RGB Backlighting Control

The keyboard is equipped with mixed RGB backlighting, offering various lighting effects and brightness levels. To control the backlighting, use the **Fn** (Function) key in combination with specific keys on the keyboard. Refer to the key legends for specific combinations to change modes, adjust brightness, or turn the lighting on/off.

Hot-Swappable Mechanical Switches

This keyboard features hot-swappable mechanical switches, allowing you to easily replace individual switches without soldering. This is useful for customization or replacing a faulty switch. Use the provided keycap puller to remove the keycap, then use a switch puller (not included, but often integrated with keycap pullers) to carefully extract the switch. Insert a new switch by aligning its pins with the sockets and pressing firmly until it clicks into place.

MAINTENANCE

Cleaning the Keyboard

To maintain the cleanliness and functionality of your keyboard:

- Use a soft, dry, lint-free cloth to wipe down the surface of the keyboard regularly.
- For deeper cleaning, use the provided keycap puller to carefully remove keycaps. Clean any dust or debris from underneath the keycaps using compressed air or a small brush.
- Avoid using harsh chemical cleaners, abrasive materials, or excessive moisture, as these can damage the keyboard's finish or internal components.

Spill Resistance

The Heayzoki Wired Gaming Keyboard features a waterproof design with drain holes to help protect against accidental liquid spills. In the event of a spill:

1. Immediately disconnect the keyboard from your computer.
2. Gently shake the keyboard to allow liquid to drain out through the designated drain holes.
3. Wipe off any visible liquid from the surface with a clean, dry cloth.
4. Allow the keyboard to air dry completely for several hours (or overnight) before reconnecting it to your computer.

TROUBLESHOOTING

If you encounter issues with your Heayzoki Wired Gaming Keyboard, please refer to the following common solutions:

- **Keyboard not responding:**
Ensure the USB cable is securely connected to both the keyboard and your computer. Try plugging the

keyboard into a different USB port. Restart your computer to refresh the USB connection.

- **Backlighting not working or incorrect:**

Verify that the backlighting is enabled using the appropriate Fn key combinations (refer to the keyboard's key legends). Cycle through different lighting modes and brightness levels to ensure it's not simply set to a very dim or off state.

- **Specific keys not registering:**

Carefully remove the keycap of the affected key using the keycap puller. Check if the mechanical switch is properly seated. If the switch appears damaged or faulty, replace it with one of the provided spare switches using a switch puller.

- **Ghosting or incorrect key presses:**

The keyboard features anti-ghosting technology. Ensure your operating system and any gaming software are up to date. If the issue persists, try connecting the keyboard to another computer to rule out software conflicts.
