Operating Instructions

Your eclife bathroom vanity is designed for daily use with convenience and durability in mind.

- **Drawers and Doors:** The vanity features 13 drawers and 4 doors with frosted glass. All drawers are equipped with high-quality soft-close slides for quiet operation. Gently push the drawers and doors to engage the soft-close mechanism.
- **Faucet:** The included water-saving faucet is designed to conserve water, with a 1.5 GPM aerator. Operate the faucet by lifting the handle for water flow and adjusting left/right for temperature control.
- **Sink:** The white square ceramic vessel sink is scratch and stain-resistant. Ensure proper drainage after each use.

Maintenance

To maintain the appearance and functionality of your vanity, follow these care instructions:

- **Cleaning:** Wipe all surfaces with a dry, soft cloth. Avoid abrasive cleaners, harsh chemicals, or scouring pads, as these can damage the finish and sink surface.
- **Spills:** Promptly wipe up any spills to prevent water damage or staining, especially on the engineered wood surfaces.
- **Sink Care:** The ceramic sink is scratch and stain-resistant. For deeper cleaning, use a mild, non-abrasive bathroom cleaner and rinse thoroughly.
- **Hardware:** Periodically check and tighten any loose screws on handles, hinges, or drawer slides.

Troubleshooting

If you encounter any issues with your vanity, consider the following common solutions:

- **Leaking Faucet/Drain:** Ensure all plumbing connections are securely tightened. Check for worn washers or seals and replace if necessary.
- **Stiff Drawers/Doors:** Verify that the drawer slides and door hinges are clean and free of debris. Lubricate with a silicone-based spray if needed. Ensure hinges are properly adjusted (refer to assembly video).
- **Cabinet Alignment Issues:** Check if the vanity is level. Use shims if necessary to ensure stability. Adjust door hinges as shown in the provided video to correct door alignment.
- **Water Pressure Issues:** If water flow is too strong or too weak, check the aerator on the faucet for clogs. Adjust the main water supply valves if necessary.
