1Mii RT5066Pro

1Mii RT5066Pro 2.4Ghz Wireless Audio Transmitter Receiver User Manual

Model: RT5066Pro

INTRODUCTION

The 1Mii RT5066Pro is a 2.4Ghz wireless audio transmitter and receiver kit designed to transmit high-fidelity audio wirelessly. This system allows you to send audio from various sources like TVs, PCs, or AV receivers to active speakers, subwoofers, or amplifiers without the need for long audio cables. It supports multiple input/output options including Optical, Coaxial, and 3.5mm (RCA) connections, offering flexibility for different audio setups.

SAFETY INFORMATION

- Do not expose the device to water or moisture.
- Avoid placing the device near heat sources or in direct sunlight.
- Use only the provided power adapters to prevent damage.
- Do not attempt to disassemble or repair the device yourself. Contact customer support for assistance.
- Keep the device away from strong magnetic fields.
- Ensure proper ventilation around the units during operation.

PACKAGE CONTENTS

Verify that all items are present in the package:

- 1Mii RT5066Pro Wireless Audio Transmitter (Tx)
- 1Mii RT5066Pro Wireless Audio Receiver (Rx)
- 2 x USB Power Adapters
- 2 x Optical Audio Cables
- 2 x 3.5mm to 3.5mm Audio Cables
- 2 x Type-C Charging Cables
- User Manual (this document)

2* USB Power Adapter

2* Optical Audio Cable

2* 3.5mm to 3.5mm Audio Cable

2* Type-C Charging Cable

Image: All components included in the 1Mii RT5066Pro wireless audio kit, laid out for inspection.

PRODUCT OVERVIEW

The RT5066Pro kit consists of two main units: a Transmitter (Tx) and a Receiver (Rx). Both units feature a compact metal shell design with external antennas for enhanced signal range.

Transmitter (Tx) Unit

The transmitter unit is responsible for receiving audio from your source device and sending it wirelessly to the receiver.

- **Audio In Ports:** Optical, Coaxial, 3.5mm (for RCA connection via adapter).
- **DC 5V Port:** USB Type-C for power input.
- **Antenna Port:** For connecting the external antenna.
- **Power Button/Indicator:** Controls power and shows status.

Image: The transmitter unit of the 1Mii RT5066Pro, highlighting its audio input ports (Optical, Coaxial, 3.5mm) and power input.

Receiver (Rx) Unit

The receiver unit receives the wireless audio signal from the transmitter and outputs it to your audio playback device.

- **Audio Out Ports:** Optical, Coaxial, 3.5mm (for RCA connection via adapter).
- **DC 5V Port:** USB Type-C for power input.

- **Antenna Port:** For connecting the external antenna.
- **Power Button/Indicator:** Controls power and shows status.

SETUP INSTRUCTIONS

Follow these steps to set up your 1Mii RT5066Pro wireless audio system.

1. Connect the Transmitter (Tx)

1. Connect one end of an audio cable (Optical, Coaxial, or 3.5mm) to the audio output port of your source device (e.g., TV, PC, AV Receiver).
2. Connect the other end of the audio cable to the corresponding **Audio In** port on the 1Mii RT5066Pro Transmitter unit.
3. Connect the Type-C charging cable to the **DC 5V** port on the Transmitter and plug the USB power adapter into a power outlet.

2. Connect the Receiver (Rx)

1. Connect one end of an audio cable (Optical, Coaxial, or 3.5mm) to the **Audio Out** port on the 1Mii RT5066Pro Receiver unit.
2. Connect the other end of the audio cable to the corresponding audio input port of your audio playback device (e.g., active speaker, subwoofer, amplifier).
3. Connect the Type-C charging cable to the **DC 5V** port on the Receiver and plug the USB power adapter into a power outlet.

Plug & Play And Easy to Use

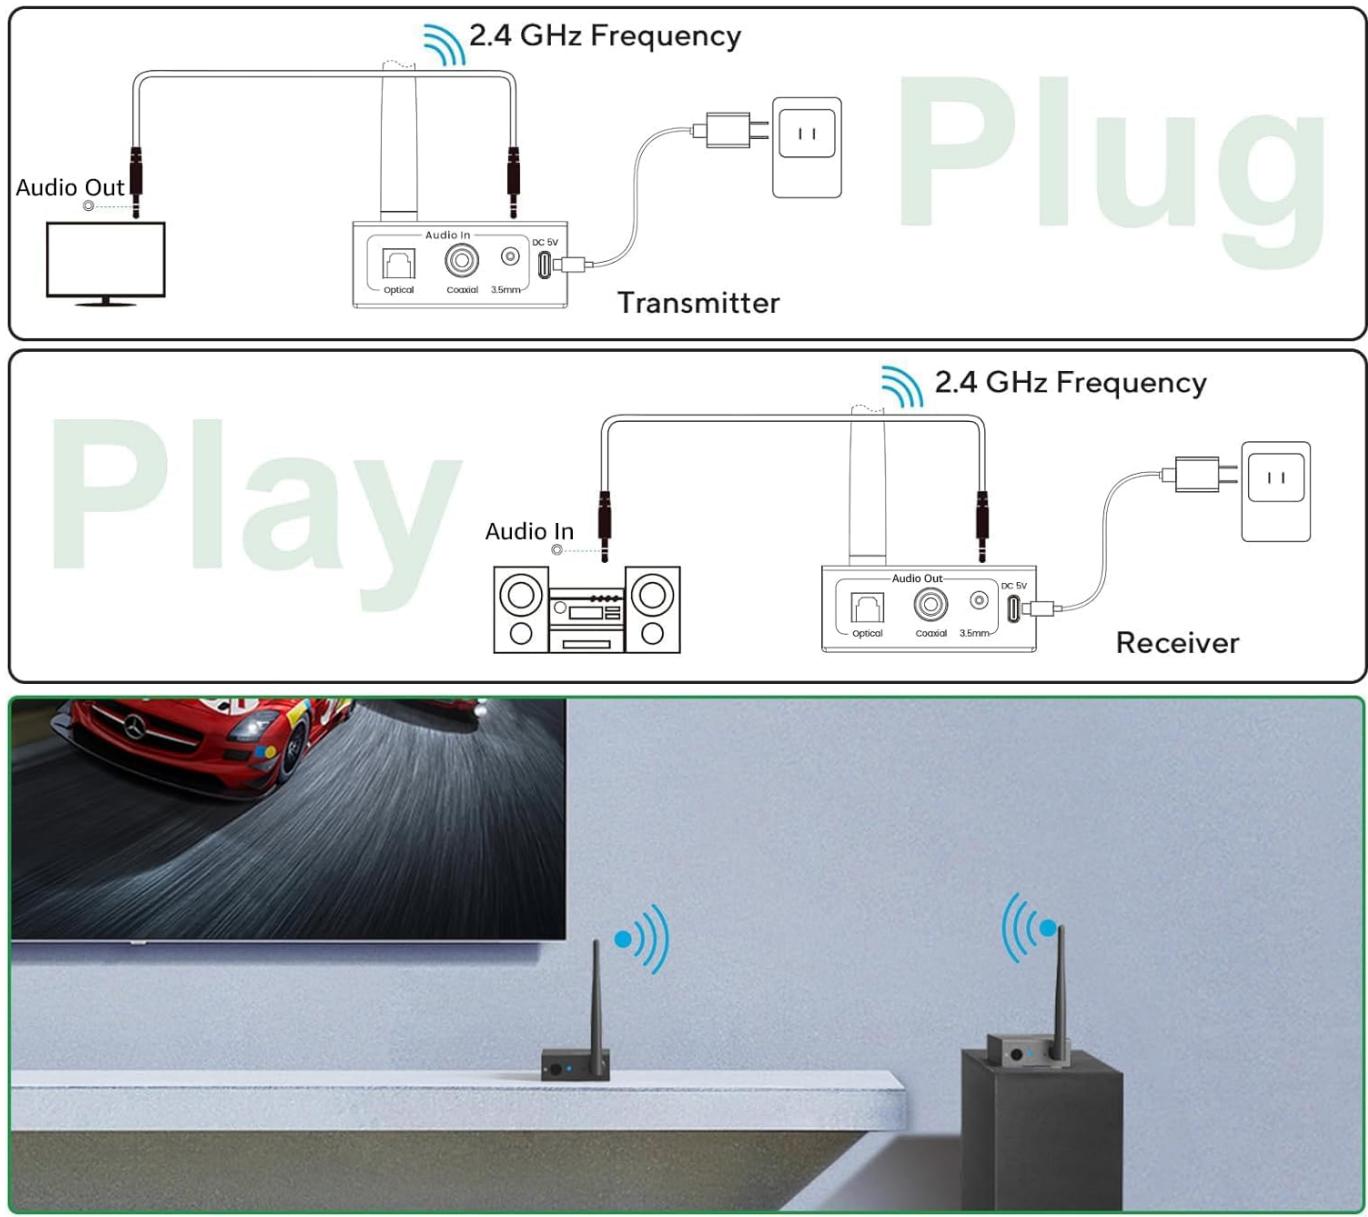

Image: A diagram illustrating the "Plug & Play" setup, showing how to connect the transmitter to an audio source (TV) and the receiver to an audio output device (stereo system).

3. Automatic Pairing

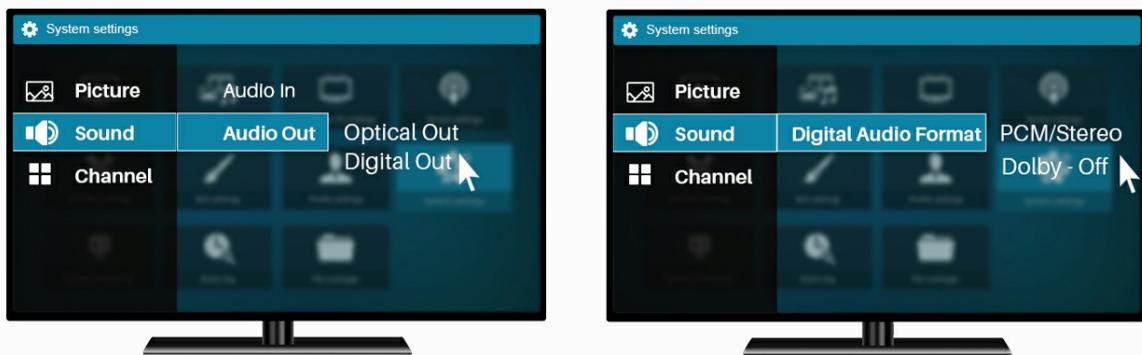

Once both the Transmitter and Receiver units are powered on, they will automatically search for and connect to each other. The indicator lights on both units will confirm a successful connection.

4. Audio Source Configuration (for TV Optical/Coaxial)

If you are using the Optical or Coaxial connection from your TV, you may need to adjust your TV's audio settings:

1. Navigate to your TV's **Settings** menu.
2. Select **Sound** or **Audio Output**.
3. Choose **Optical Out** or **Digital Out**.
4. Set the **Digital Audio Format** to **PCM/Stereo** or ensure **Dolby - Off**. The RT5066Pro does not support Dolby or DTS formats.

For Using TV Optical/Coaxial Port

Settings→Sound→Expert Settings→
Digital Audio Format→PCM/Stereo or Dolby - Off

Settings→Sound→Expert Settings→
Digital Audio Format→PCM/Stereo or Dolby - Off

Image: Screenshots of a television's audio settings menu, demonstrating how to select Optical/Digital Out and set the digital audio format to PCM/Stereo or turn Dolby off.

Note: The RT5066Pro is designed for audio transmission and does not support HDMI connections.

Image: A comprehensive diagram illustrating various input sources (TV, AV Receiver, PC) connected to the transmitter, and various output devices (Soundbar, Power Amplifier, Subwoofer, Active Speakers) connected to the receiver, highlighting Optical, Coaxial, and 3.5mm interfaces.

OPERATING INSTRUCTIONS

Power On/Off

Press the power button on each unit to turn it on or off. The units will automatically connect once powered on.

Audio Transmission

Once connected, audio from your source device will be wirelessly transmitted to your playback device. Ensure the volume on both your source and playback devices is adjusted appropriately.

The system operates on a 2.4GHz frequency, providing a low latency of less than 20ms, ensuring audio and video synchronization. It supports high-quality audio up to 24bit/192kHz.

Zero Latency Between Any Audio Devices

2.4GHz wireless technology
brings you perfect audio and video synchronization

Image: A diagram illustrating the concept of zero latency with 2.4GHz wireless technology, showing a person watching TV with synchronized audio from a speaker.

Range Considerations

The 1Mii RT5066Pro can achieve a wireless range of up to 328 feet (100m) outdoors and 100-165 feet (30-50m) indoors. For optimal performance and range, avoid placing the units near Wi-Fi routers (2.4G/5.8G) or other devices that may cause interference. Physical obstacles like walls and metal objects can also affect the transmission range.

Long Range & Stable Connection

up to 328FT (100M) and dual gain antenna

Extended Long Range

Up to 328FT (100M)

Image: An illustration demonstrating the extended long range capability of the 1Mii RT5066Pro, showing the transmitter and receiver units wirelessly connected across a large living space.

MAINTENANCE

- Cleaning:** Use a soft, dry cloth to clean the units. Do not use liquid cleaners or aerosols.
- Storage:** When not in use for extended periods, store the units in a cool, dry place away from direct sunlight.
- Antennas:** Handle the antennas carefully to avoid bending or breaking them.

TROUBLESHOOTING

Problem	Possible Cause	Solution
---------	----------------	----------

Problem	Possible Cause	Solution
No audio output	<ul style="list-style-type: none"> Units not powered on. Units not paired. Incorrect audio cable connection. TV audio settings incorrect (for Optical/Coaxial). Source/playback device volume too low. Unsupported audio format (e.g., Dolby/DTS). 	<ul style="list-style-type: none"> Ensure both Tx and Rx units are powered on. Verify indicator lights show a successful connection. Check all audio cables are securely connected to the correct input/output ports. Adjust TV audio output to PCM/Stereo and disable Dolby/DTS. Increase volume on both source and playback devices. Ensure the audio source is outputting a supported format (PCM/Stereo).
Static or distorted audio	<ul style="list-style-type: none"> Interference from other 2.4GHz devices (e.g., Wi-Fi router). Units too far apart or obstacles blocking signal. Loose cable connections. 	<ul style="list-style-type: none"> Move the units away from Wi-Fi routers or other wireless devices. Reduce the distance between Tx and Rx, or reposition them to minimize obstacles. Ensure all cables are firmly connected.
RCA port not working (if using 3.5mm to RCA adapter)	<ul style="list-style-type: none"> Potential compatibility issue with specific RCA cables/adapters. 	<ul style="list-style-type: none"> Ensure you are using a standard 3.5mm to RCA cable. Some users have reported better results with specific adapters if direct RCA connection is problematic.

SPECIFICATIONS

Feature	Detail
Model Number	RT5066Pro
Connectivity Technology	2.4GHz Wireless
Audio Sampling Rate	Up to 24bit/192kHz
Latency	Less than 20ms
Wireless Range (Outdoor)	Up to 328 feet (100m)
Wireless Range (Indoor)	100-165 feet (30-50m)
Input Ports (Tx)	Optical, Coaxial, 3.5mm AUX (RCA compatible)
Output Ports (Rx)	Optical, Coaxial, 3.5mm AUX (RCA compatible)
Power Input	DC 5V (USB Type-C)
Product Dimensions	3.43 x 2.76 x 0.98 inches (per unit)
Item Weight	10.4 ounces (295 grams)
Color	Black

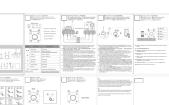

WARRANTY AND SUPPORT

1Mii products are designed for reliability and performance. For warranty information and technical support, please refer to the official 1Mii website or contact their customer service directly. Keep your purchase receipt for warranty claims.

Documents - 1Mii – RT5066Pro

No Rx.
Thank you so much for your order.
We are sorry for you to use 1x4x4 RT5066Pro 2.4GHz Transmitter and 1x Transmitter Receiver.

Set

1. How to use 1x4x4 RT5066Pro transmitter? 2. How to connect the TV and speaker?
2. Use the power supply adapter and USB charging cable to power on both the transmitter and receiver.
After power on, both RT5066Pro transmitter and receiver will automatically enter pairing mode with red light flashing red and red, once successfully paired, both indicators will stay blue.
2. Connect the "AUDIO OUT" jack of your TV to the 3.5mm Optical/Coaxial "audio in" jack of RT5066Pro Transmitter.
3. Connect the "AUDIO IN" jack of your speaker to the 3.5mm Optical/Coaxial audio Out jack of RT5066Pro Receiver.

3. Connect

If you connect the RT5066Pro Transmitter to your TV via Optical/Coaxial audio cable, please make sure the audio out is set to Optical/Coaxial External speaker (SPDIF) and the audio format is set to 2CH/48KHz/24bit.
Go to Settings->audio & digital output > speaker > SPDIF.

Go to Settings->audio & digital output > digital output audio format > 2CH/48KHz/24bit, or you can turn off.

If you connect the RT5066Pro Transmitter to your TV via 3.5mm AUX audio cable, the above TV settings are not required.

2. Trouble shooting:

No Sound/No Sound

Make sure the RT5066Pro Transmitter is connected to the "AUDIO OUT" jack of your TV (not AUDIO IN).

Make sure the RT5066Pro Receiver is connected to the "AUDIO IN" jack of your speaker (not AUDIO OUT).

Make sure the audio cable are plugged fully (you can unplug and plug again).

Others are digital or coaxial audio cable. Set audio format to PC/External speaker/optical and then try.

*Plug more than one audio cable at the same time may cause no sound, please ONLY use one audio cable to connect the transmitter and receiver.

Don't connect the receiver to a TV or speaker or direct point because these will cause interference.

*Transmitter are 2.4G wireless devices, they can not be paired to any other bluetooth device, this is a normal function.

If you have any questions about the RT5066Pro, please free to ask for help from us, we will answer as soon as possible.

Best regards

RT5066Pro
