Figure 2: An internal diagram of the Witt ETNA Rotante oven, illustrating the U-shaped main burner, booster burner, and rotating pizza stone.

SETUP

1. Unpacking and Placement:

- Carefully remove the oven from its packaging. It is recommended to have two people for lifting due to its weight (approximately 86.8 lbs).
- Unfold the aluminum legs and ensure they are securely locked into place.
- Place the oven on a stable, level, non-combustible outdoor surface, such as a patio table or dedicated outdoor kitchen counter. Ensure sufficient clearance from walls and other objects (refer to Safety Information).

2. Gas Connection:

- Connect the provided gas regulator and hose to a suitable propane (LPG) gas cylinder. Ensure the connection is tight.
- Open the gas cylinder valve slowly and check for any leaks using a soapy water solution. Bubbles indicate a leak. If a leak is detected, turn off the gas immediately and tighten connections. Do not operate the oven if a leak persists.

3. Power for Rotation:

- The rotating stone mechanism requires power. Insert batteries (not included) into the designated compartment or connect the oven to a power outlet using the provided power cord.

OPERATING INSTRUCTIONS

1. Preheating:

- Ensure the gas cylinder valve is open.
- Turn the main control knob to the high position.
- Ignite the main burner according to the instructions on the oven unit (typically by pushing and turning the knob).
- Turn on the booster burner control knob.
- Allow the oven to preheat for approximately 15 minutes until the pizza stone reaches 500 °C (950 °F). Use an infrared thermometer to verify the stone temperature.

Figure 3: A top-down view illustrating the U-shaped main burner providing even heat over a pizza on the rotating stone.

2. Cooking Pizza:

- Once the oven is fully preheated, you may adjust the main burner to a lower setting if the top of the pizza is cooking too quickly compared to the bottom. The booster burner will help maintain stone temperature.
- Carefully launch your pizza onto the rotating stone using a pizza peel.
- The rotating stone will ensure even cooking. Monitor the pizza closely as it cooks very quickly, typically in under 60 seconds.
- Use a pizza peel to retrieve the cooked pizza.

Booster burner

No more waiting for the stone to reheat. It's ready when you are.

Figure 4: A pizza being carefully inserted into the hot Witt ETNA Rotante oven using a pizza peel.

3. After Use:

- Turn off both the main burner and booster burner control knobs.
- Close the valve on the gas cylinder.
- Allow the oven to cool completely before handling or storing.

MAINTENANCE

Cleaning the Pizza Stone:

- Allow the pizza stone to cool completely before attempting to clean it.
- Scrape off any excess food residue with a stiff brush or spatula.
- For stubborn stains, use a damp cloth with plain water. Avoid using soap or detergents as they can be absorbed by the porous

- stone and affect pizza flavor.
- Ensure the stone is completely dry before the next use.

Cleaning the Oven Exterior:

- Wipe down the exterior surfaces with a damp cloth and mild detergent. Rinse thoroughly and dry.
- Do not use abrasive cleaners or pads, as they can damage the finish.

Storage:

- Store the oven in a dry, protected area when not in use, especially during adverse weather conditions.
- Disconnect the gas cylinder and store it in a well-ventilated outdoor area.

TROUBLESHOOTING

Problem	Possible Cause	Solution
Oven not heating to desired temperature (e.g., only 450°F)	Insufficient preheating time; low gas pressure; cold ambient temperature.	Ensure at least 15 minutes of preheating with both burners on high. Check gas cylinder level. Operate in a sheltered area if windy or cold.
Pizza top burns before bottom cooks	Stone not hot enough; main burner too high.	Ensure stone is fully preheated to 500°C (950°F) using an infrared thermometer. Reduce the main burner flame slightly after launching the pizza, while keeping the booster burner on.
Rotating stone stops working	Battery depletion; power connection issue; motor malfunction.	Check and replace batteries if using battery power. Ensure power cord is securely connected if using mains power. If issues persist, contact customer support.
Gas burner does not ignite	Gas cylinder empty; gas valve closed; igniter issue; gas line blockage.	Check gas cylinder level and ensure valve is open. Verify igniter spark. Check for kinks or blockages in the gas hose.
