# Bewinner Automatic Tonearm Lifter User Manual

Professional High-End Safety Raiser for LP Turntable Discs and Record Players

## 1. INTRODUCTION

---

Thank you for choosing the Bewinner Automatic Tonearm Lifter. This device is designed to enhance your vinyl listening experience by automatically lifting the tonearm at the end of a record, protecting both your stylus and records. Please read this manual carefully before installation and use to ensure optimal performance and longevity of your product.

## 2. PRODUCT FEATURES

- **Automatic Lifting:** Automatically lifts the tonearm at the end of the record, preventing stylus wear and record damage.
- **Hydraulic Operation:** Features a hydraulic lift with a rubber rod for smooth and safe operation.

- **Wide Compatibility:** Designed to be compatible with most bearing tonearm types, including single spindle and gimbal designs.
- **Adjustable Height:** Configurable height to work with various tonearms and turntable models.
- **Durable Construction:** Made from premium aluminum materials for high-end construction and extended product life.
- **Adjustable Sensitivity:** Includes a slider to adjust the lifting force sensitivity for precise operation.

**Safe Operation**  
 Automatic lifting of the tonearm at the end of the record to protect the stylus tip  
 Hydraulic lift with rubber lift rod for safe and fluent operation  
**Easy To Install**  
 Features a trigger lift design that can be used with most bearing tonearm types, from single spindle to gimbal  
**Lifting Function**  
 Adds an automatic armrest lifting function to almost all manual turntables  
 Providing a slider to adjust the lifting force sensitivity

## 4. SETUP AND INSTALLATION

---

Follow these steps to properly install your Automatic Tonearm Lifter:

1. **Placement:** Identify a flat, stable surface near your turntable's tonearm. The lifter should be positioned so that its lifting arm can smoothly engage with the tonearm without obstruction.
2. **Height Adjustment:** The lifter features an adjustable height design. Use the adjustment mechanism (typically a screw or knob) to set the lifter's height so that its lifting arm is slightly below the tonearm when the tonearm is in its playing position.
3. **Sensitivity Adjustment:** A slider is provided to adjust the lifting force sensitivity. Experiment with this setting to ensure the tonearm is lifted gently and reliably at the end of the record. Start with a medium setting and adjust as needed.
4. **Secure Positioning:** Ensure the lifter is stable and will not move during operation. Some models may include adhesive pads or a weighted base for stability.

**Protective**  
Made of premium materials of high end construction, Has intelligent protection for records to extend the life of the record player

**Adjustable Height**  
Features an adjustable height design that can be configured to work with a variety of tonearms on a variety of turntables

## 5. OPERATING INSTRUCTIONS

Once installed, the Bewinner Automatic Tonearm Lifter operates automatically:

- Begin playing your record as usual, manually placing the tonearm onto the record.
- As the tonearm reaches the end of the record (the run-out groove), it will make contact with the lifting arm of the device.
- The hydraulic mechanism will then gently and automatically lift the tonearm off the record surface, preventing it from continuously playing in the run-out groove.
- After the tonearm is lifted, you can manually return it to its rest position.

## 6. MAINTENANCE

To ensure the longevity and proper functioning of your tonearm lifter, follow these simple maintenance guidelines:

- **Cleaning:** Wipe the device periodically with a soft, dry cloth to remove dust and fingerprints. Avoid using abrasive cleaners or solvents.
- **Inspection:** Regularly inspect the rubber rod and the lifting arm for any signs of wear or damage. Ensure the hydraulic mechanism operates smoothly.
- **Lubrication:** The hydraulic mechanism is designed for long-term, maintenance-free operation. Do not attempt to lubricate internal components unless specifically instructed by the manufacturer.

Image: A detailed view of the lifting mechanism, emphasizing the importance of keeping it clean and free from obstructions.

## 7. TROUBLESHOOTING

Problem	Possible Cause	Solution
Tonearm not lifting or lifting too late.	Incorrect height adjustment; sensitivity too low.	Adjust the lifter's height to ensure proper contact. Increase the lifting force sensitivity using the slider.
Tonearm lifting too early or unexpectedly.	Sensitivity too high; lifter positioned too close to the tonearm's path.	Decrease the lifting force sensitivity. Reposition the lifter slightly further from the tonearm's initial path.
Lifter mechanism feels stiff or sticky.	Accumulation of dust or debris.	Clean the device thoroughly with a soft, dry cloth. Ensure no foreign objects are obstructing the mechanism.
