Fan Speed Control

The cooling fan features a switch to select between different operating modes:

- **OFF:** The fan is turned off.

- **L (Low Speed):** The fan operates continuously at a low speed of 3600 RPM.
- **H (High Speed):** The fan operates continuously at a high speed of 5000 RPM.

Adjust the fan speed according to your gaming needs and environmental conditions.

4. MAINTENANCE

Regular maintenance helps ensure the longevity and optimal performance of your cooling fan.

- **Cleaning:** Periodically clean the fan blades and vents to prevent dust buildup. Use a soft, dry cloth or a can of compressed air to gently remove dust. Ensure the fan is powered off and disconnected from the PS5 before cleaning.
- **Airflow:** Ensure that the PS5 console and the cooling fan are placed in an area with adequate ventilation. Avoid blocking the air intake or exhaust vents of both the console and the fan.

5. TROUBLESHOOTING

If you encounter issues with your IINE PS5 Cooling Fan, refer to the following common solutions:

- **Fan Not Turning On:**
 - Ensure the fan's USB connector is securely plugged into the PS5 console's USB port.
 - Verify that the PS5 console is powered on or in rest mode.
 - Check the fan speed switch; ensure it is not set to 'OFF'. Try switching to 'L' or 'H' to test manual operation.
- **Fan Noise is Excessive:**
 - In 'H' (High Speed) mode, the fan will produce more noise. If noise is a concern, switch to 'L' (Low Speed) or 'AUTO' mode.
 - Ensure the fan is securely attached to the PS5 console to prevent vibrations.
 - Clean the fan blades and vents for any obstructions or dust buildup.
- **Cooling Performance Seems Inadequate:**
 - Ensure the fan is set to 'H' (High Speed) or 'AUTO' mode for maximum cooling.
 - Verify that the PS5 console and fan vents are not obstructed.
 - Ensure the room temperature is not excessively high.
- **USB Passthrough Port Not Functioning:**
 - Confirm the cooling fan is powered on.
 - Remember that the USB passthrough port is for charging only and does not support data transfer.
 - Try connecting a different device to confirm if the issue is with the port or the device being charged.
