Compatibility

This charcoal filter is compatible with the following Whirlpool Microwave WMH53521HZ series models:

- WMH53521HZ0
- WMH53521HZ1
- WMH53521HZ2

- WMH53521HZ3
- WMH53521HZ4
- WMH53521HZ5
- WMH53521HZ6

It is identified as "Part 7" within the Air Flow Parts group of these microwave models.

Installation Guide

Follow these steps to locate and replace the charcoal filter in your Whirlpool microwave.

Step 1: Locate Your Group Parts

Identify the general area of the part you need within the microwave's overall structure. The microwave has 6 main group parts: Air Flow Parts, Cabinet and Installation Parts, Interior and Ventilation Parts, Door Parts, Turntable Parts, and Control Panel Parts. The charcoal filter belongs to the **Air Flow Parts** group.

Step 2: Identify the Specific Part

Refer to the detailed parts diagram for the Air Flow Parts section of your microwave. The charcoal filter is typically labeled as "Part 7" in this diagram.

The image above shows the "AIR FLOW PARTS" diagram. Locate the component labeled "7" to identify the charcoal filter.

Step 3: Replacement Procedure

1. **Safety First:** Before attempting any replacement, ensure the microwave oven is unplugged from the power outlet to prevent electrical shock.
2. **Access the Filter:** Depending on your specific microwave model, the charcoal filter is usually located behind the vent grille, often at the top front of the microwave. You may need to open the microwave door and locate latches or screws that secure the vent grille.
3. **Remove Old Filter:** Carefully unlatch or unscrew the vent grille. Once the grille is removed, the old charcoal filter can typically be slid out or unclipped from its housing. Note its orientation for correct installation of the new filter.
4. **Install New Filter:** Insert the new Kircuit charcoal filter into the housing, ensuring it is oriented correctly. It should fit snugly.
5. **Reassemble:** Reattach the vent grille, securing any latches or screws.
6. **Restore Power:** Plug the microwave back into the power outlet.

If you are unsure about any step, it is recommended to consult a qualified technician or refer to your microwave's original user manual for specific instructions on accessing the charcoal filter.

Maintenance

The charcoal filter is crucial for removing cooking odors from the air recirculated by your microwave's ventilation system. Over time, the filter becomes saturated with odors and grease particles, reducing its effectiveness.

Filter Replacement Frequency:

It is recommended to replace the charcoal filter every 6 to 12 months, depending on your cooking habits and the frequency of microwave use. If you notice persistent odors or reduced ventilation efficiency, it may be time for an earlier replacement.
Note: Charcoal filters are not washable and should be replaced, not cleaned.

Troubleshooting

Problem	Possible Cause	Solution
Persistent cooking odors after microwave use.	Saturated or old charcoal filter.	Replace the charcoal filter with a new Kircuit replacement filter.
Reduced air circulation or fan noise without effective odor removal.	Blocked or improperly installed filter.	Check filter installation to ensure it is seated correctly. If still ineffective, replace the filter. Ensure the microwave's fan is operating correctly.
Filter does not fit.	Incorrect filter model purchased.	Verify your microwave's full model number (e.g., WMH53521HZ0) and ensure you have purchased the correct "Part 7" charcoal filter for that specific series. Refer to the compatibility section.
