4. Maintenance

Regular maintenance helps ensure the longevity and performance of your computer case.

4.1 Cleaning the Case

- **Exterior:** Use a soft, damp cloth to wipe down the aluminum alloy and glass surfaces. Avoid abrasive cleaners.
- **Glass Panels:** The 4mm tempered glass panels have a 2H hardness explosion-proof protective film. Clean gently with a microfiber cloth.
- **Dust Filters:** The case includes magnetic dust screens on the bottom and a built-in filter on the PSU side panel. Periodically remove and clean these filters to maintain optimal airflow and prevent dust buildup.

4.2 General Care

- Ensure the case is placed on a stable, level surface.
- Avoid placing heavy objects on top of the case.
- Do not expose the case to extreme temperatures or direct sunlight for prolonged periods.

5. Troubleshooting

This section addresses common issues you might encounter during assembly or operation.

5.1 Installation Difficulties

- **Tight Spaces:** The TK-1 is a compact mini tower case. Take your time during component installation, especially with cable management, to ensure all parts fit correctly.
- **Stripping Screws:** The case uses small screws for certain panels. Apply gentle pressure and use the correct screwdriver size to avoid stripping.

- **Fan Fitment:** Ensure fans and radiators adhere to the specified dimensions. For example, some 120mm AIOs might have clearance issues with certain motherboard components if fan thickness exceeds 25mm.

5.2 Airflow and Temperature Issues

- **High Temperatures:** Verify that all fans are installed with the correct airflow direction (bottom intake, top exhaust). Ensure dust filters are clean and not obstructing airflow.
- **Fan Noise:** Check that fan screws are tightened and no cables are interfering with fan blades.

5.3 Front I/O Not Functioning

- Ensure all front panel cables (USB, Audio) are securely connected to the correct headers on your motherboard. Refer to your motherboard manual for header locations.
