

SPYPOINT LIT-22

SPYPOINT LIT-22 Rechargeable Lithium Battery Pack User Manual

Model: LIT-22
Brand: SPYPOINT

INTRODUCTION

This user manual provides comprehensive instructions for the SPYPOINT LIT-22 Rechargeable Lithium Battery Pack. Designed for use with SPYPOINT Flex series cellular trail cameras, this battery pack offers extended power and reliable performance, especially in challenging outdoor conditions. Please read this manual thoroughly to ensure proper installation, operation, and maintenance of your LIT-22 battery pack.

KEY FEATURES

- **Improved Battery Life:** The LIT-22 rechargeable lithium battery pack (7.4V, 5.4Ah) provides exceptional energy storage and consistent performance, minimizing energy loss and extending the lifespan of your trail camera.
- **Fewer Camera Visits:** Its extended battery life significantly reduces the need for frequent trips to refresh your trail camera batteries, minimizing disturbances in your scouting area.
- **Enhanced Durability:** Built to withstand rugged outdoor conditions, the LIT-22 battery ensures reliable performance and effective operation even in extreme temperatures ranging from -20 °C (-4 °F) to 50 °C (122 °F).
- **Flex Series Compatibility:** Specifically designed for all SPYPOINT FLEX series trail cameras. Using two batteries allows for seamless swapping, ensuring continuous operation.
- **Easy Installation & Charging:** Seamlessly replaces the existing battery tray in your SPYPOINT FLEX series game camera. Recharge easily using the included AC charging cord (USB-C to USB-A) with any compatible wall plug.

SETUP: INSTALLATION AND CHARGING

Battery Overview

Image: Two SPYPOINT LIT-22 rechargeable lithium battery packs, showing the front with "THIS SIDE UP" arrow and "SPYPOINT LIT-22 RECHARGEABLE LITHIUM BATTERY" text.

Image: A single SPYPOINT LIT-22 rechargeable lithium battery pack, angled to show its thickness and design.

Installation into Flex Series Camera

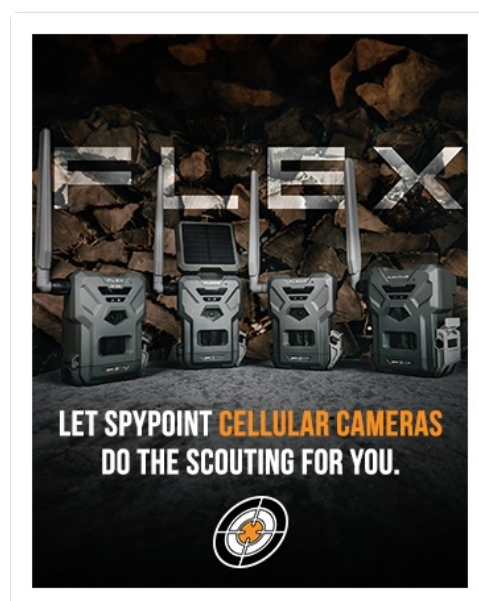

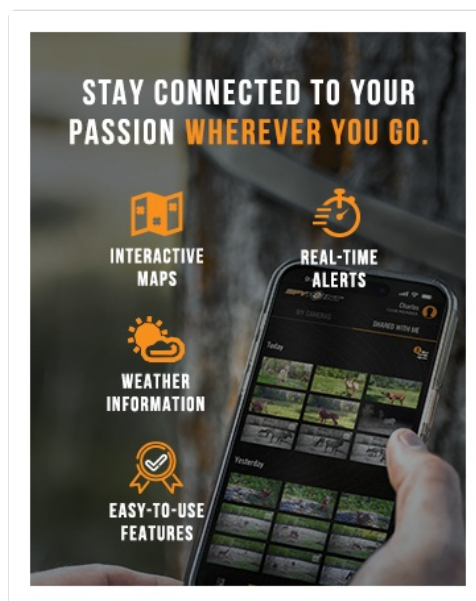

The LIT-22 battery pack is designed for seamless integration with SPYPOINT Flex series trail cameras. Follow these steps to install the battery:

1. Open the battery compartment of your SPYPOINT Flex series trail camera. This is typically located at the bottom or back of the camera.
2. Remove any existing battery tray or disposable batteries from the compartment.
3. Align the LIT-22 battery pack with the battery slot, ensuring the "THIS SIDE UP" arrow on the battery pack points upwards, matching the orientation indicated on the camera's battery compartment.

4. Gently slide the LIT-22 battery pack into the compartment until it clicks securely into place. Ensure it is fully seated to establish proper electrical contact.
5. Close the battery compartment door firmly to seal it against environmental elements.

Image: A person's hands are shown inserting the LIT-22 battery pack into the bottom of a SPYPOINT Flex series trail camera, which is strapped to a tree. The battery pack slides into a dedicated slot.

Images: A sequence showing the LIT-22 battery pack being inserted into the battery slot of a SPYPOINT Flex series trail camera, from initial alignment to full insertion.

Charging the LIT-22 Battery Pack

The LIT-22 battery pack comes with a USB-C to USB-A charging cable. To charge the battery:

1. Locate the USB-C port on the LIT-22 battery pack.
2. Connect the USB-C end of the provided cable to the battery pack.
3. Connect the USB-A end of the cable to a compatible USB wall adapter (not included) or a powered USB port.
4. The battery pack will begin charging. Refer to your camera's manual or the battery pack's indicators (if any) for charging status.

Your browser does not support the video tag.

Video: An official SPYPOINT video demonstrating the features and benefits of the LIT-22 battery pack, including its compatibility with Flex series cameras and charging capabilities.

OPERATING THE LIT-22 BATTERY PACK

Once installed, the LIT-22 battery pack powers your SPYPOINT Flex series trail camera, providing reliable and long-lasting operation. Its lithium-ion chemistry ensures stable voltage output, which is crucial for consistent camera performance, especially in varying temperatures.

- **Extended Runtime:** The 5.4Ah capacity allows for significantly longer operational periods compared to standard AA batteries, reducing the frequency of battery changes.
- **Cold Weather Performance:** Unlike alkaline batteries, the LIT-22 maintains its performance in cold conditions (down to -20 °C / -4 °F), ensuring your camera continues to function effectively during winter months.
- **Seamless Swapping:** For continuous monitoring, it is recommended to have a second LIT-22 battery pack. When one battery is depleted, you can quickly swap it with a fully charged one, minimizing downtime for your camera.

MAINTENANCE

Proper maintenance ensures the longevity and optimal performance of your LIT-22 battery pack:

- **Regular Charging:** Recharge the battery pack promptly when its charge level is low. Avoid completely draining the battery for extended periods, as this can reduce its overall lifespan.
- **Storage:** If storing the battery pack for an extended period, ensure it is charged to approximately 50-70% capacity. Store it in a cool, dry place away from direct sunlight and extreme temperatures.
- **Cleaning:** Periodically inspect the battery contacts on both the pack and the camera for dirt or corrosion. Clean them gently with a dry, soft cloth if necessary.
- **Avoid Physical Damage:** Protect the battery pack from drops, impacts, and punctures, which can damage the internal components and compromise safety.

TROUBLESHOOTING

If you encounter issues with your LIT-22 battery pack, consider the following common troubleshooting steps:

- **Battery Not Charging:**
 - Ensure the charging cable is securely connected to both the battery pack and the power source.
 - Try a different USB wall adapter or USB port to rule out a faulty power source.
 - Check the charging cable for any visible damage.
- **Short Battery Life:**

- Verify that the battery pack is fully charged before deployment.
- Extreme cold temperatures can still affect battery performance, though the LIT-22 is designed to mitigate this. Consider camera settings that might consume more power (e.g., frequent photo/video capture, high resolution, cellular transmission frequency).
- Ensure the camera's firmware is up to date, as updates can sometimes improve power efficiency.

• **Camera Not Powering On:**

- Confirm the LIT-22 battery pack is fully inserted and seated correctly in the camera's battery compartment.
- Check if the battery pack itself is charged.
- Inspect the battery contacts for any debris or corrosion that might prevent proper connection.
- If possible, test the camera with another known-good power source to determine if the issue is with the battery or the camera.

If these steps do not resolve the issue, please contact SPYPOINT customer support for further assistance.

SPECIFICATIONS

Brand	SPYPOINT
Model Number	LIT-22
Battery Cell Composition	Lithium Ion
Voltage	7.4V
Battery Capacity	5.4 Amp Hours (37 Wh)
Operating Temperature	-20 °C (-4 °F) to 50 °C (122 °F)
Product Dimensions	8 x 9 x 7 inches (packaging)
Item Weight	8.5 ounces
Compatibility	SPYPOINT FLEX Series Trail Cameras
Charging Cable	USB-C to USB-A (included)
