## My Pet Command MPC150

# My Pet Command Indoor Pet Barrier System

Model: MPC150

## INTRODUCTION

The My Pet Command Indoor Pet Barrier System is an effective solution for training your pets to avoid specific areas within your home. This hidden fence system utilizes a compact barrier transmitter and a comfortable, waterproof collar to establish an adjustable, invisible boundary. It helps prevent your dog from accessing off-limit zones such as furniture, specific rooms, or delicate areas, promoting better behavior and safety.

Adjustable Barrier Range

## What You Will Get?

### DOG WHISTLE

Dog Training whistle

### CHARGING

Charging Cable

### TEST LIGHT

### ELECTRIC SHOCK

Electric Shock  
Terminals

### SILICONE

Silicone Protection  
Cover

The My Pet Command Indoor Wireless Pet Fence helps define off-limit areas for your dog.

## PRODUCT COMPONENTS

Your My Pet Command Indoor Pet Barrier Kit includes all necessary items for setup and operation:

Complete kit with barrier, collar, and accessories.

Key features of the system components.

- (1) **Pet Barrier Transmitter Box:** The central unit that creates the invisible boundary.
- (1) **Waterproof Collar:** Designed for neck sizes 6" (10 cm) to 20" (53 cm), featuring dual correction modes.
- (1) **USB Charging Cable:** For recharging the pet collar.
- (2) **Sets of Contact Prongs:** Includes both long and short prongs to suit different coat lengths.
- (1) **Set of Silicone Covers:** For comfortable use with contact prongs.
- (1) **Set of Plastic Prongs:** For a no-shock, tone-only training option.
- (1) **Test Bulb:** To verify the static correction function of the collar.
- (1) **Operating Manual:** This guide provides detailed instructions.
- (1) **Ultrasonic Dog Training Whistle and Guide:** An additional tool for training.

## Barrier Unit Placement

Place the small transmitter barrier box in the center of the area you wish to make off-limits. The system creates a circular boundary, so central placement ensures an even coverage area. The barrier unit requires 3x AA batteries (not supplied) for operation. Ensure the unit is placed where it will not be easily disturbed by pets.

The barrier unit creates the invisible boundary.

My Pet Command

# Indoor Pet Barrier!

This hidden fence electric pet containment system is the ultimate solution

## Specification

Adjustable  
Range

Long-Lasting  
& Durable

Safe and  
Humane

Easily Train  
your pets

Consider the adjustable range when placing the barrier.

## Collar Preparation

Attach the appropriate contact prongs (long for thick coats, short for thin coats) to the collar receiver. For a tone-only training option, use the provided plastic prongs. Ensure the collar fits snugly but comfortably around your dog's neck, allowing two fingers to fit between the collar and the neck. The collar is rechargeable via the supplied USB cable.

The collar is rechargeable and comes with various contact points.

## OPERATING INSTRUCTIONS

### Adjusting the Barrier Range

The barrier unit features an adjustable radius range of approximately 1-8 feet. This allows you to customize the size of the off-limits zone to suit your specific needs. Experiment with the placement of the barrier unit and the range setting to achieve the desired boundary for your pet.

# Safe Static Shock

Turn Off the Shock function and train with Tone only if required

Adjust the barrier unit to set the desired radius for the off-limits zone.

## Correction Modes (Static and Tone)

The collar offers dual correction modes: SAFE STATIC SHOCK with a tone warning, or Tone only correction. You can select the mode based on your training preferences. If you prefer to train with tone only, ensure the shock function is turned off. Always introduce the tone warning before any static correction to allow your pet to associate the sound with the boundary.

## Controlling Multiple Collars

The system allows for the control of two collars simultaneously, making it ideal for households with multiple pets. You can set separate 'A' and 'B' frequencies to differentiate between pets, or have both collars respond to the same frequency. Additional collars and barrier units can be purchased separately to expand your system and create more off-limits zones around your house.

One Transmitter For Separate Collars

# Control 2 collars

Separately or Together ideal for more than 1 pet

**ADD ADDITIONAL COLLARS AND BARRIERS  
SOLD SEPARATELY**

Control up to two collars with one barrier unit, with individual frequency settings.

## MAINTENANCE

### Battery Information

The barrier transmitter box requires 3x AA batteries (not supplied). These typically need to be replaced approximately every 1.5 months if the unit is left on continuously. The training collars feature rechargeable batteries and are charged via the supplied USB cable. They require recharging every 3-4 days if left on all the time. Simply plug the USB cable into any standard USB power socket for charging.

### Water Resistance

The collars are IP54 waterproof rated, meaning they are protected from dust and splashing water from any direction.

This makes them suitable for indoor use and can withstand minor splashes, but they should not be submerged in water.

# IP54 Waterproof Rated Collars

The IP54 waterproof rating ensures durability against splashes.

## TROUBLESHOOTING

Problem	Possible Cause	Solution
Collar not activating or no static correction.	Low collar battery; incorrect prong length; shock function turned off; collar not properly fitted; test bulb not used correctly.	Recharge collar fully. Ensure correct contact prongs are used for your dog's coat. Verify shock function is enabled if desired. Adjust collar fit. Use the test bulb to confirm static output.

Problem	Possible Cause	Solution
Collar battery life is shorter than expected.	Frequent activation; continuous use; aging battery.	Ensure collar is fully charged before use. Recharge every 3-4 days with continuous use. If battery life significantly degrades, contact customer support.
Barrier unit not working.	Low or dead AA batteries in the barrier unit.	Replace the 3x AA batteries in the barrier transmitter box.
Collar randomly turns off.	Not properly turned on after charging or handling.	Ensure the collar is manually turned on after charging or if it has been off for a period.

## SPECIFICATIONS

**Brand:** My Pet Command

**Model:** MPC150

**Product Dimensions (Barrier Unit):** 6 x 4 x 3 cm

**Product Weight (Total Kit):** 422 g

**Collar Neck Size Compatibility:** 6" (10 cm) to 20" (53 cm)

**Barrier Range:** Adjustable radius of approximately 1-8 feet

**Collar Waterproof Rating:** IP54 (splash resistant)

**Barrier Unit Battery Type:** 3x AA Batteries (not included)

**Collar Battery Type:** Rechargeable Lithium Ion (included)

**Country of Origin:** China
