## My Pet Command MPC150 Xtra Barrier

# My Pet Command Indoor Pet Barrier Instruction Manual

Model: MPC150 Xtra Barrier

Brand: My Pet Command

## INTRODUCTION

---

This manual provides detailed instructions for the My Pet Command Indoor Pet Barrier system, designed to help train your pets to avoid specific off-limit areas within your home. This system utilizes a barrier transmitter and a wireless collar (collar sold separately with kit or as an extra accessory) to create an adjustable boundary.

The My Pet Command Indoor Pet Barrier transmitter, a key component of the wireless pet containment system.

## PRODUCT COMPONENTS

---

### Barrier Transmitter (MPC150 Xtra Barrier)

The main unit that creates the adjustable boundary.

The circular barrier transmitter unit, featuring a digital display and control buttons for setting the boundary range.

### **Collar (Sold Separately with Kit or as Extra)**

The wireless, waterproof (IP54) collar worn by your pet. It receives signals from the barrier and delivers tone or

static correction.

The orange pet collar with the attached receiver unit, which is rechargeable and waterproof.

### Accessories (Included with Collar Kit)

- **USB Charging Cable:** For recharging the collar.
- **Metal Prongs:** Various sizes for different dog coat lengths.
- **Silicone Covers:** To be placed over metal prongs if static correction is not desired or for added comfort.
- **Dog Whistle:** For additional training purposes.
- **Test Light Tool:** A clear plastic tool with a bulb to test static correction functionality.

One Transmitter For Separate Collars

# Control 2 collars

Separately or Together ideal for more than 1 pet

**ADD ADDITIONAL COLLARS AND BARRIERS  
SOLD SEPARATELY**

Dog A

Dog B

Both A-B

A collection of accessories including the USB charging cable, different sized metal prongs, and a test light for the collar.

## SETUP GUIDE

### Powering the Barrier Transmitter

The barrier transmitter requires 3x AA batteries (not included). Use high-quality, non-rechargeable batteries for optimal performance. A fresh set of batteries can last up to 1.5 months if the unit is left on continuously.

# This is the extra Barrier Transmitter box

The base of the barrier transmitter, indicating the location for AA battery installation.

## Charging the Collar (for Collar Kit users)

The collar is rechargeable via the supplied USB cable. A fully charged collar can last 3-4 days if left on all the time. Connect the USB cable to the charging port on the collar and plug it into any standard USB power socket.

The collar's charging port, covered by a metal disc, which can be opened with a coin for USB cable connection.

## Setting the Barrier Range

The barrier's range can be adjusted from approximately 1 to 8 feet. Use the '+' and '-' buttons on the transmitter to set the desired radius. The display will show the current range setting.

## Specification

Adjustable Range

Long-Lasting & Durable

Safe and Humane

Easily Train your pets

The barrier transmitter's display indicating the adjustable range, with plus and minus buttons for control.

## Pairing Collars to the Barrier

The barrier supports multiple collars and offers three channels: A, B, or A+B. This allows for individual pet training or simultaneous control of multiple pets.

1. **Select Channel:** On the back of the barrier transmitter, use the switch to select channel A, B, or A+B.
2. **Activate Barrier:** Turn on the barrier transmitter by pressing the '+' button.
3. **Activate Collar:** Press and hold the On/Off button on the collar until the indicator light turns on. The collar will automatically pair to the selected channel on the barrier.
4. **For Multiple Collars:** To pair a second collar, ensure the first collar is paired and the barrier is on. Switch the channel on the barrier (e.g., from A to B). Then, turn on the second collar. It will pair to the new channel. To control both simultaneously, switch the barrier to A+B.

# Safe Static Shock

Turn Off the Shock function and train with Tone only if required

The channel selection switch on the back of the barrier transmitter, allowing selection of channel A, B, or both A+B for multi-pet use.

An instructional video demonstrating how to set up the barrier, adjust its range, and pair collars for effective pet training.

## OPERATING MODES

---

The collar offers two operating modes:

### Mode 1: Tone + Static Correction

In this mode, if your pet enters the set boundary, the collar will first emit a warning tone. If the pet does not leave the area, it will then deliver a static correction. This sequence may repeat up to three times before reverting to tone-only.

One Transmitter For Separate Collars

# Control 2 collars

Separately or Together ideal for more than 1 pet

**ADD ADDITIONAL COLLARS AND BARRIERS  
SOLD SEPARATELY**

Dog A

Dog B

Both A-B

The collar unit with its metal contact points, used for delivering static correction in Mode 1.

## Mode 2: Tone Only

In this mode, the collar will only emit a warning tone when your pet enters the boundary. No static correction will be delivered. This mode is ideal for sensitive pets or for initial training phases.

To switch between modes, briefly press the On/Off button on the collar. A single green blink every 5 seconds indicates Mode 1 (Tone + Static). Two green blinks every 5 seconds indicates Mode 2 (Tone Only).

## FEATURES

### Dual Mode Collar

Use static correction together with Tone or Just Tone only

### Long Battery Life

Rechargeable collars

### Adjustable Range

Allowing you to control the indoor area

### Adjustable Collar

Can be used for all pet neck sizes 6"-20" (10-53 cm)

### IP54 WATERPROOF

Product is certified waterproof

The collar's indicator light, which blinks to show the current operating mode (single blink for Tone + Static, double blink for Tone Only).

## MAINTENANCE

### Battery Replacement (Barrier)

Replace the 3x AA batteries in the barrier transmitter approximately every 1.5 months, or when the display indicates low power.

### Collar Charging

Recharge the collar every 3-4 days if it's left on continuously. Ensure the charging port is securely covered after charging to maintain its IP54 waterproof rating.

### Cleaning

Wipe down the barrier and collar with a damp cloth as needed. Do not submerge the barrier in water.

## TROUBLESHOOTING

## Collar Not Responding

- Check if the collar is charged and turned on.
- Ensure the barrier transmitter has fresh batteries and is turned on.
- Verify that the collar is paired to the correct channel (A, B, or A+B) on the barrier.
- Test the static correction using the provided test light tool.

## Inconsistent Range

- Ensure the barrier transmitter is not placed on metal surfaces, as this can interfere with the radio signal.
- Adjust the range setting on the barrier transmitter.
- Obstacles like thick walls or large metal objects can affect the signal. Try repositioning the barrier.

## Static Correction Not Working (if desired)

- Ensure the collar is in Mode 1 (Tone + Static Correction).
- Check that the metal prongs are making proper contact with your pet's skin. You may need to use longer prongs for pets with thick fur.
- If using silicone covers, ensure they are designed to allow static correction through, or remove them for full contact.

## PRODUCT SPECIFICATIONS

Feature	Detail
Model Number	MPC150 Xtra Barrier
Brand	My Pet Command
Item Weight	9.3 ounces
Item Dimensions (LxWxH)	2.36 x 0.79 x 2.36 inches
Barrier Power	3x AA Batteries (Not Included)
Collar Power	Rechargeable (USB Cable Included with Collar Kit)
Collar Waterproof Rating	IP54
Adjustable Range	Approx. 1-8 feet
Correction Types	Tone, Static Correction
Target Audience	Dogs (All Breeds)
Country of Origin	China
