7. TROUBLESHOOTING

If you encounter any issues with your oven, refer to the following common problems and solutions.

Problem	Possible Cause	Solution
Oven does not turn on.	Not plugged in; power outage; timer not set.	Ensure the oven is properly plugged into a working outlet. Check your household's circuit breaker. Turn the timer knob to a desired cooking time.
Food is not cooking evenly.	Incorrect heating mode; oven overloaded; improper rack position; convection fan issue.	Select the appropriate heating mode (e.g., top and bottom with convection). Avoid overcrowding the oven. Adjust rack position for optimal heat distribution. Ensure the convection fan is not obstructed.
Excessive smoke or odor during operation.	Food spills; residual manufacturing oils (first use); crumb tray needs cleaning.	Clean any food spills immediately after the oven cools. For first use, this is normal; ensure ventilation. Clean the crumb tray and oven interior thoroughly.
Timer not working.	Timer knob not set correctly.	Ensure the timer knob is turned past the 'OFF' position to the desired time.
