3.2 Connecting to the Extender (Wireless)

1. On your mobile phone or computer, go to Wi-Fi settings.

2. Look for a new Wi-Fi network named "WiFi pro_XXXXXX" or "WiFi 5G pro_XXXXXX" (where XXXXXX are the last 6 characters of the extender's MAC address, usually found on a sticker on the device). Connect to this network. This network will initially be unsecured.

3. Once connected, open a web browser (e.g., Chrome, Firefox) and enter the default IP address or domain name provided in the quick installation guide (e.g., 192.168.10.1 or zrelogin.cn).

4. You will be prompted to log in. The default username and password are typically "admin" (check your quick installation guide for exact details).

3.3 Configuration Steps (Repeater Mode)

This mode extends your existing Wi-Fi network.

1. After logging in, select "Repeater Mode" or "Wireless Extend".

2. The extender will scan for available Wi-Fi networks. Select your main router's Wi-Fi network (SSID) from the list. If your network is hidden, you may need to enter it manually.

3. Enter the password for your main router's Wi-Fi network.

4. You can choose to keep the same SSID for the extended network or create a new one (e.g., "YourNetworkName-EXT").

5. Click "Next" or "Apply" to save the settings. The extender will restart.

6. Wait approximately 30 seconds for the extender to apply settings and restart.

7. Reconnect your devices to the new extended Wi-Fi network using the password you set.

4. OPERATING MODES

The Maxuni WiFi Extender/Repeater supports two primary operating modes:

4.1 Repeater Mode (Wireless Extension)

In Repeater Mode, the device wirelessly connects to your existing router's Wi-Fi network and re-broadcasts it, extending the coverage area. This is ideal for eliminating Wi-Fi dead zones in your home or office.

- Connects wirelessly to your main router.
- Extends the range of your existing Wi-Fi signal.

- Suitable for areas with weak Wi-Fi signals.

4.2 Access Point (AP) Mode (Wired to Wireless)

In AP Mode, the device connects to your router via an Ethernet cable and then broadcasts a new Wi-Fi network. This is useful for adding wireless capability to a wired network or creating a new Wi-Fi hotspot in a specific area.

- Connects to your main router via an Ethernet cable.
- Creates a new Wi-Fi network from a wired connection.
- Ideal for converting a wired network into a wireless one.

5. PLACEMENT RECOMMENDATIONS

Proper placement of your WiFi Extender is crucial for optimal performance. Consider the following guidelines:

- **Optimal Distance:** Place the extender approximately 10-40 feet (3-12 meters) from your main router.

- **Avoid Obstructions:** Walls, large metal objects, and electronic devices can interfere with Wi-Fi signals. Try to place the extender in an open area.
- **Signal Strength Indicator:** Use the Signal LED on the extender to determine the best placement. A solid green light typically indicates a good connection to the main router.
- **Central Location:** Position the extender in a central location between your router and the area where you need improved Wi-Fi coverage.

7. TROUBLESHOOTING

If you encounter issues with your Maxuni WiFi Extender/Repeater, refer to the following common problems and solutions:

- **No Power:**
  - Ensure the extender is securely plugged into a working power outlet.
  - Check if the power outlet is functional by plugging in another device.

- **Cannot Connect to Extender's Wi-Fi:**
    - Make sure the extender is powered on and the Power LED is lit.
    - Perform a factory reset (see Section 3.1) and try connecting again.
    - Verify you are selecting the correct initial Wi-Fi network (e.g., "WiFi pro_XXXXXX").

- **No Internet After Connecting to Extended Wi-Fi:**
    - Ensure the extender is successfully connected to your main router. The Signal LED should indicate a good connection.
    - Verify the password entered for your main router's Wi-Fi network during setup is correct.
    - Try repositioning the extender closer to your main router (see Section 5).
    - Restart both your main router and the extender.

- **Slow Speed on Extended Wi-Fi:**
    - Relocate the extender to an optimal position, ensuring it's not too far from the main router or too close to obstructions.
    - Check for interference from other electronic devices.
    - Ensure your main router is providing a strong and stable signal.
    - If using Repeater Mode, consider switching to AP Mode if a wired connection to the router is feasible for better performance.

- **Forgot Login Password for Extender's Web Interface:**
    - Perform a factory reset (see Section 3.1) to restore the default login credentials.
