

## OWON HDS2202S

# OWON HDS2202S Digital Handheld Oscilloscope

3-in-1 Oscilloscope, Multimeter, and Waveform Generator

Model: HDS2202S | Brand: OWON

### INTRODUCTION

The OWON HDS2202S is a versatile 3-in-1 digital handheld device integrating an oscilloscope, a 20,000-count multimeter, and a 1-channel waveform generator. Designed for portability and convenience, it is ideal for outdoor maintenance, rapid on-site measurements, automobile maintenance, and power detection. Its compact size and robust features make it an essential tool for professionals and enthusiasts alike.

Figure 1: OWON HDS2202S device and standard accessories.

## KEY FEATURES

- **3-in-1 Functionality:** Combines a digital oscilloscope, a 20,000-count true RMS multimeter, and a 1-channel waveform generator.
- **High Performance Oscilloscope:** 200MHz bandwidth, 1GSa/s sample rate, 8K record length, 10,000 wfms/s waveform refresh rate, 8 bits vertical resolution, 10mV/div - 10V/div vertical sensitivity.
- **Advanced Multimeter:** 20,000 count resolution, auto-ranging, supports measuring voltage (AC 750V/DC 1000V max input), current (DC 10A/AC 10A max input), resistance, diode, capacitance, and continuity.
- **Versatile Waveform Generator:** 25MHz signal generator, 125MSa/s sampling rate, 20 mVpp - 5 Vpp amplitude range (high impedance), 8K waveform length, 14-bit vertical resolution, 50Ω output impedance. Outputs Sine (0.1Hz - 25MHz), Square/Pulse/Arbitrary (0.1Hz - 5MHz), and Ramp (0.1Hz - 1MHz) waveforms.
- **Clear Display:** 3.5-inch color LCD with adjustable brightness and backlight time for optimal readability in various lighting conditions.

- **Connectivity:** USB Type-C interface for communication with a computer and support for external power banks. Standard SCPI communication function for secondary development.
- **Safety:** Built-in fuse for automatic device protection.

## Instrument TRANSFORMERS

*variety of functions in one*

## FUNCTION

### Oscilloscope

Max 10,000 wfms/s waveform refresh rate

- + Dual channels input, bandwidth up to 200 MHz, max. real-time sampling rate 1GSa/s
- + Max 8k record length
- + Cursor measurement function
- + Multiple auto measurement functions
- + XY function
- + One-key auto set function, easy to detect and debug

### Multimeter

20,000 counts, true RMS

- + Voltage, current, resistance, diode, capacitance measuring, and continuity test
- + Auto range function, easy to detect and debug
- + Max AC 750V, DC 1000V input voltage
- + Independent input of multimeter and oscilloscope
- + Reading hold function
- + Relative measurement function

### Waveform Generator

Only for HDS242S, HDS272S, HDS2102S, HDS2202S

Max 25MHz frequency output

- + Output sine, square, ramp, pulse, and built-in special waveforms
- + 0.1Hz frequency resolution
- + 14-bit vertical resolution, 125MSa/s high sampling rate
- + 8k waveform length
- + Max 5Vpp output amplitude

## What's in the Box

The standard package for your OWON HDS2202S includes the following items:

- 1 x OWON HDS2202S Main Unit
- 2 x Oscilloscope Probes (pairs of probe and probe adjust)
- 2 x BNC Leads (including BNC to Alligator Clip and BNC Q9 cable)
- 1 x Multimeter Lead (pair)
- 1 x Multimeter Test Lead (additional set)
- 1 x USB Type-C Cable
- 1 x Power Adapter
- 1 x Soft Carrying Bag
- 1 x Product Manual (this document)

## Standard Accessories

1\* pairs of probe and probe adjust

1 \* BNC to Alligator Clip

1 \* Product Manual

1\* soft bag

2 \* Multimeter Lead

1 \* Adapter

1\* USB cable

## Additional Accessories

1 \* Multimeter test lead

1 \* BNC Q9 cable

1\* BNC to Alligator Clip

1\* pairs of probe and probe adjust

Figure 3: All included accessories for the HDS2202S.

## SETUP

### 1. Charging the Device

The HDS2202S comes with built-in lithium-ion batteries. Before first use, fully charge the device using the provided USB Type-C cable and power adapter. A full charge typically provides approximately 6 hours of continuous operation.

- Connect the USB Type-C cable to the port on the side of the device.
- Connect the other end of the USB cable to the power adapter and plug it into a wall outlet.
- The charging indicator on the device will show charging status.

**Built-in Fuse(Automatically Protect the Device)**

**Built-in Lithium Batteries  
(Continuously Working for about 6 Hours)**

Figure 4: HDS2202S internal battery and fuse for protection.

## 2. Initial Power On and Display Settings

Press and hold the power button to turn on the device. Upon first power-on, you may wish to adjust display settings for optimal viewing.

- Navigate to the **System** menu.
- Adjust **Brightness** (System → F1 → F1) and **Backlight time** (System → F1 → F2) as needed.
- The device features a 3.5-inch color LCD.

**Adjustable Brightness**  
(System→F1→F1)

**Adjustable  
Backlight time**  
(System→F1→F2)

**3.5 inch LCD**

**Language**  
(System→F2→F1)

Figure 5: HDS2202S LCD display features.

### 3. Connecting Probes and Leads

Connect the appropriate probes or leads based on the function you intend to use (Oscilloscope, Multimeter, or Waveform Generator). Ensure secure connections for accurate measurements.

Figure 6: HDS2202S port locations and dimensions.

## OPERATING INSTRUCTIONS

### Switching Modes

The HDS2202S allows seamless switching between Oscilloscope, Multimeter, and Waveform Generator modes. Use the **Mode** button to cycle through the available functions.

#### 1. Oscilloscope Function

The oscilloscope mode allows for waveform observation and analysis. It features 2 channels with 200MHz bandwidth and 1GSa/s sample rate.

- Connect oscilloscope probes to CH1 and/or CH2 input connectors.
- Press **Mode** until the oscilloscope interface is displayed.
- Use the navigation buttons to adjust vertical sensitivity (V/div), horizontal time base (s/div), and trigger settings.
- The **Auto** button can automatically set optimal display parameters for the input signal.

- Utilize cursor measurement and multiple auto measurement functions for detailed analysis.

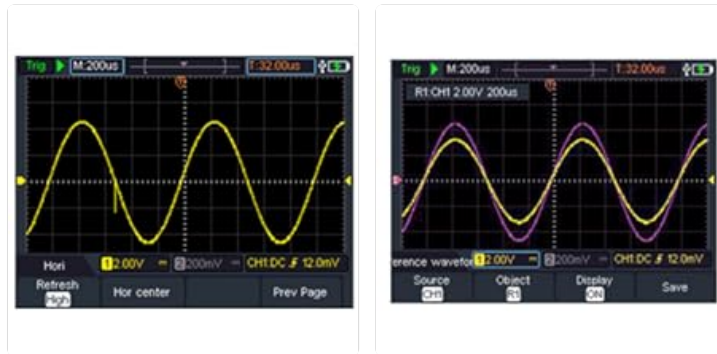

Figure 7: Oscilloscope mode displaying waveforms.

## 2. Multimeter Function

The multimeter mode provides precise measurements of various electrical parameters with 20,000 counts resolution.

- Connect the multimeter leads to the appropriate input jacks (V $\Omega$ +C, mA, A, COM).
- Press **Mode** until the multimeter interface is displayed.
- Use the function buttons (F1-F4) or navigation to select the desired measurement type (Voltage, Current, Resistance, Diode, Capacitance, Continuity).
- The device supports auto-ranging for ease of use.

Figure 8: Multimeter mode displaying voltage measurement.

## 3. Waveform Generator Function

The built-in waveform generator can output various standard and arbitrary waveforms for testing and calibration purposes.

- Connect a BNC lead to the GEN OUT connector.
- Press **Mode** until the waveform generator interface is displayed.
- Adjust parameters such as frequency, amplitude (Vpp), offset, and waveform type (Sine, Square, Ramp, Pulse, Arbitrary) using the navigation and function buttons.

Figure 9: Waveform Generator mode settings.

## 4. PC Communication

The HDS2202S can connect to a computer via its USB Type-C interface for data transfer and remote control using compatible software. It supports standard SCPI commands for advanced users and secondary development.

- Connect the device to your computer using the provided USB Type-C cable.
- Install the necessary drivers and software (available from the manufacturer's website).
- Follow the software instructions for data logging, waveform analysis, and remote control.

## Official Product Video Demonstration

Your browser does not support the video tag.

Video 1: Official product video demonstrating the key features and portability of the OWON HDS series, highlighting its use in various applications like outdoor maintenance, on-site measurement, and power detection. It also showcases the multimeter and waveform generator functions.

## MAINTENANCE

- **Cleaning:** Use a soft, dry cloth to clean the device. Do not use abrasive cleaners or solvents.
- **Storage:** Store the device in a cool, dry place away from direct sunlight and extreme temperatures. Use the provided soft bag for protection during storage and transport.
- **Battery Care:** For long-term storage, ensure the battery is charged to approximately 50%. Recharge every few months to prevent deep discharge.
- **Probe Care:** Handle probes and leads carefully. Avoid sharp bends or excessive pulling that could damage the cables. Regularly inspect for wear and tear.
- **Fuse Replacement:** The device has a built-in fuse for protection. If the device stops functioning due to an overload, the

fuse may need replacement. Refer to a qualified technician for fuse replacement.

TROUBLESHOOTING

Problem	Possible Cause	Solution
Device does not power on.	Low battery; Power button not pressed long enough; Internal fault.	Charge the device fully. Press and hold the power button for a few seconds. If problem persists, contact support.
No waveform displayed in Oscilloscope mode.	Probes not connected correctly; Input signal too small or too large; Incorrect time base or vertical scale settings; Trigger not set correctly.	Ensure probes are securely connected. Adjust V/div and s/div settings. Use the <b>Auto</b> button. Check trigger level and mode.
Multimeter readings are inaccurate or "OL" (Overload).	Incorrect measurement range; Leads not connected properly; Faulty leads.	Ensure correct measurement type is selected. Check lead connections. Try different leads if available. The device supports auto-ranging, but manual range selection might be needed for specific cases.
Waveform generator output is incorrect or absent.	Incorrect settings (frequency, amplitude, offset); Output not enabled; Faulty BNC cable.	Verify all waveform generator settings. Ensure "Output ON" is selected. Check the BNC cable for damage or poor connection.
Cannot connect to PC.	USB cable issue; Driver not installed; Software not running or configured correctly.	Use the provided USB Type-C cable. Install the latest drivers from the manufacturer. Ensure the PC software is correctly installed and configured.

SPECIFICATIONS

Parameter	Detail
Model Number	HDS2202S
Product Dimensions	7.8 x 1.5 x 3.78 inches (198 x 38 x 96 mm)
Weight	1.31 Pounds (Approx. 0.6 kg without battery)
Oscilloscope Bandwidth	200MHz
Oscilloscope Sample Rate	1GSa/s
Oscilloscope Channels	2 Channels
Record Length	8K

Parameter	Detail
Waveform Refresh Rate	10,000 wfirms/s
Vertical Resolution	8 bits
Vertical Sensitivity	10mV/div - 10V/div
Multimeter Counts	20,000 counts
Max Input Voltage (Multimeter)	AC 750V / DC 1000V
Max Input Current (Multimeter)	DC 10A / AC 10A
Waveform Generator Frequency	Sine (0.1Hz - 25MHz), Square/Pulse/Arbitrary (0.1Hz - 5MHz), Ramp (0.1Hz - 1MHz)
Waveform Generator Amplitude	20 mVpp - 5 Vpp (high impedance)
Waveform Generator Vertical Resolution	14 bits
Display	3.5 inch Color LCD
Battery Type	2 Lithium Ion batteries (included)

### WARRANTY AND SUPPORT

OWON products are designed for reliability and performance. For warranty information, technical support, or service inquiries, please refer to the official OWON website or contact your local distributor. Keep your purchase receipt as proof of purchase for warranty claims.

For the latest software updates and additional resources, visit the official OWON support page.
