5. Maintenance

Proper maintenance will extend the life and appearance of your Dmora Sillano cabinet.

- **Cleaning:** Wipe surfaces with a soft, damp cloth. For stubborn marks, use a mild, non-abrasive cleaning solution and dry immediately with a clean cloth.
- **Avoid:** Do not use harsh chemicals, abrasive cleaners, or scouring pads, as these can damage the melamine finish.
- **Spills:** Immediately wipe up any spills to prevent moisture damage to the engineered wood.
- **Hardware:** Periodically check all screws and fasteners to ensure they remain tight. Re-tighten if necessary.
- **Environment:** Avoid placing the cabinet in direct sunlight or near heat sources, which can cause discoloration or warping.

6. Troubleshooting

If you encounter any issues with your Dmora Sillano cabinet, refer to the following common troubleshooting tips.

Problem	Possible Cause	Solution
Cabinet is wobbly or unstable.	Uneven floor; loose fasteners; incorrect assembly.	Ensure the cabinet is on a level surface. Check and tighten all assembly screws. Verify all components are correctly installed according to the manual.
Doors do not align or close properly.	Hinges are loose or incorrectly adjusted; cabinet frame is not square.	Adjust the metal hinges using a screwdriver. Most hinges allow for vertical, horizontal, and depth adjustments. Ensure the cabinet is assembled squarely.

Problem	Possible Cause	Solution
Difficulty inserting screws or missing pre-drilled holes.	Manufacturing variation; user error during assembly.	Ensure you are using the correct screws for each part. If a pilot hole is missing, carefully create a small pilot hole with an appropriate drill bit (smaller than the screw diameter) to prevent material splitting. Do not force screws.
Shelves sag or cannot hold weight.	Overloaded shelf; incorrect shelf support installation.	Do not exceed the maximum weight capacity of 9 kg per shelf. Ensure shelf supports are fully inserted and the shelf is properly seated.
