6. DAILY AND WEEKLY PROGRAMMING

The Program Mode allows you to set specific temperature schedules for different times of the day and days of the week. This feature helps automate your heating, ensuring your home is warm when you need it and saving

energy when you don't.

To set up your daily and weekly programs, navigate to the 'Program' section within the G-Life SMART application. You can define multiple time periods and corresponding target temperatures for each day. The thermostat will automatically adjust the heating to follow your set schedule.

7. OPEN WINDOW DETECTION

The CERES HT340S thermostat includes an intelligent 'Open Window Detection' feature. This function monitors the indoor air temperature for sudden and significant drops, which typically occur when a window or door is opened.

When an open window is detected, the thermostat will temporarily pause heating to prevent unnecessary energy consumption. Heating will resume automatically once the temperature stabilizes or after a set period. This feature contributes to significant energy savings by avoiding heating an open space.

Açık Pencere Algılama Özelliği

Akıllı Oda Termostatiniz, iç mekan hava sıcaklığındaki ani düşüşleri ölçer ve bu düşüşleri “açık pencere” olarak tanır.

Böylece kombiniz çalışırken açık pencere olduğunda oluşabilecek israfı önler ve enerji tasarrufuna katkı sağlar.

This image focuses on the 'Open Window Detection' feature of the G-Life SMART app. It explains that the smart room thermostat measures sudden drops in indoor air temperature, identifying them as an open window. This feature helps prevent energy waste when a window is open while the heating system is operating.
