## MAINTENANCE

To ensure the longevity and appearance of your iPormis bed frame, follow these maintenance guidelines:

- **Fabric Care:** The upholstered parts of the bed frame should be dry cleaned only. For minor spills, gently blot with a clean, dry cloth. Avoid using harsh chemicals or abrasive cleaners.
- **Frame Cleaning:** Wipe down the metal and wood components with a soft, damp cloth. Ensure all parts are dry after cleaning to prevent rust or warping.
- **Hydraulic System:** Periodically check the hydraulic pistons for any signs of wear or leakage. If issues are observed, contact customer support. Do not attempt to lubricate or repair the pistons yourself.
- **Slat System:** Inspect the wooden slats regularly for any cracks or damage. Replace any broken slats immediately to maintain proper mattress support.

## TROUBLESHOOTING

If you encounter any issues with your iPormis bed frame, refer to the common problems and solutions below:

Problem	Possible Cause	Solution
Hydraulic lift is difficult to raise or lower.	Mattress weight exceeds the maximum lifting capacity (154 lbs). Obstruction in the storage area. Hydraulic pistons may require inspection.	Ensure mattress weight is within limits. Remove any obstructions. If the issue persists, contact customer support for assistance.
Bed frame makes noise (squeaking/creaking).	Loose connections or bolts. Slats not properly seated.	Check and tighten all bolts and screws. Ensure all slats are correctly positioned and secured. The design includes noise-free foam, so persistent noise indicates an assembly issue.
Charging station not working.	Power cord not plugged in. Wall outlet issue. Overloaded circuit.	Verify the 6.6-foot power cord is securely plugged into a functional wall outlet. Test the outlet with another device. Reduce the number of devices plugged into the charging station.
