# SAFWAT RWFVRF Replacement Water Filter RVRF336 Instruction Manual

## 1. Introduction

This manual provides essential instructions for the installation, operation, and maintenance of your SAFWAT RWFVRF Replacement Water Filter. This filter is specifically designed for use with Viking Free-Standing French Door refrigerators, model RVRF336, ensuring clean and filtered water for your household.

## 2. Important Safety Information

**Do not use with water that is microbiologically unsafe or of unknown quality without adequate disinfection before or after the system. Systems certified for cyst reduction may be used on disinfected waters that may contain filterable cysts.**
Always refer to your refrigerator's owner's manual for specific safety guidelines and instructions related to water filter replacement.

## 3. Setup and Installation

The SAFWAT RWFVRF filter is designed for straightforward replacement. For detailed, model-specific instructions, always consult the owner's manual provided with your Viking RVRF336 refrigerator. The following are general steps:

1. **Locate the Filter Compartment:** The water filter is typically located inside the refrigerator compartment, often in the upper right corner or within the base grille.
2. **Turn Off Water Supply:** It is recommended to turn off the water supply to the refrigerator before beginning the replacement process to prevent leaks.
3. **Remove Old Filter:** Depending on your model, twist the old filter counter-clockwise or push a release button to disengage it. Pull the filter straight out.
4. **Prepare New Filter:** Remove the protective cap from the new SAFWAT RWFVRF filter.
5. **Install New Filter:** Align the new filter with the filter housing. Push it firmly into the housing and twist clockwise until it locks securely into place. You may feel a slight resistance as the O-rings seal.
6. **Restore Water Supply:** Turn the water supply back on.
7. **Flush the System:** Dispense approximately 2-3 gallons of water through the refrigerator's dispenser to flush out air and any loose carbon particles. This is crucial for optimal performance and taste.

8. **Reset Filter Indicator:** If your refrigerator has a filter change indicator light, reset it according to your refrigerator's owner's manual.

## 4. Operating Instructions

Once installed and flushed, the SAFWAT RWFVRF filter operates automatically, providing filtered water whenever the dispenser or ice maker is used. The filter is designed to reduce various contaminants, improving the taste and odor of your water.
Regular use will gradually reduce the filter's effectiveness. Your refrigerator's filter indicator light will typically signal when a replacement is due.

## 5. Maintenance

To maintain optimal water quality and flow, regular filter replacement is essential.

- **Replacement Frequency:** It is recommended to replace your SAFWAT RWFVRF water filter every 6 months, or sooner if you notice a significant decrease in water flow or a return of unpleasant tastes or odors.
- **Flushing After Replacement:** Always flush 2-3 gallons of water through the dispenser after installing a new filter to ensure proper function and remove any carbon fines.

## 6. Troubleshooting

- **Slow Water Flow:**

- Ensure the filter is fully inserted and locked into place.
- If recently replaced, continue flushing water to remove air.
- If the filter is old, it may be clogged and require replacement.

- **Bad Taste or Odor in Water:**
  - Ensure the filter was properly flushed after installation.
  - The filter may have reached the end of its service life and needs replacement.
- **Water Leaks from Filter Area:**
  - Ensure the filter is correctly seated and twisted fully into the housing.
  - Check the O-rings on the filter for any damage or misalignment.
  - Verify that the water supply connection to the refrigerator is secure.
