## 6. MAINTENANCE

Regular maintenance ensures the longevity and safe operation of your chainsaw.

### Chain Lubrication:

Always ensure the chain is adequately lubricated. Lack of lubrication can cause premature wear of the chain and guide bar, and can lead to overheating. Apply bar and chain oil frequently during use.

### Cleaning:

- After each use, remove the battery.
- Clean sawdust and debris from the chain, guide bar, and motor housing using a brush or compressed air.
- Wipe down the exterior of the tool with a damp cloth.

### Chain Tension:

Periodically check the chain tension. A loose chain can derail, and a too-tight chain can cause excessive wear and reduce cutting efficiency. Adjust as needed using the provided screwdriver.
