OPERATING INSTRUCTIONS

Gas Lift Storage Mechanism

The bed frame features a gas lifting mechanism for easy access to ample under-bed storage. To lift the frame:

1. Remove any items from the mattress surface that might obstruct lifting.
2. Locate the fabric pull strap at the foot of the bed.
3. Firmly grasp the strap and lift the mattress frame upwards. The gas lifts will assist in raising and holding the frame in an

open position.

4. To lower, gently pull the frame downwards. The gas lifts will provide resistance for a controlled descent.

This storage space is ideal for suitcases, storage bags, or out-of-season bedding and clothes, helping to keep your room tidy.
