OPERATING INSTRUCTIONS

Power On/Off

Once connected to power, the switch will automatically power on. To power off, disconnect the power cord. For proper shutdown procedures, consult the advanced configuration guide if available through the management interface.

Network Connectivity

The switch provides 24 Gigabit Ethernet ports for connecting devices at 10/100/1000 Mbps speeds. The 4 SFP ports are for 1 Gigabit Ethernet uplinks, allowing connection to other network devices or a core network.

Power over Ethernet Plus (PoE+)

The 24 ports support PoE+ with a total power budget of 195W. This allows you to power compatible devices such as IP phones, wireless access points, and IP cameras directly through the Ethernet cable, simplifying deployment and reducing cabling requirements.

Management Interface

The switch is fully managed, offering advanced configuration options through its Web UI, CLI (Command Line Interface), and Cisco Business mobile app. These interfaces allow you to configure VLANs, QoS, security features, and monitor network performance.

MAINTENANCE

Firmware Updates

Regularly check the Cisco support website for the latest firmware updates. Applying updates can improve performance, add new features, and address security vulnerabilities. Follow the instructions provided with the firmware package for a safe update process.

Cleaning

Keep the switch clean and free of dust. Use a soft, dry cloth to wipe the exterior. Do not use liquid or aerosol cleaners directly on the switch. Ensure ventilation openings are clear of obstructions.

Environmental Considerations

Operate the switch within its specified temperature range (up to 45 degrees Celsius) and humidity levels. Avoid placing the switch in direct sunlight or near heat sources.

TROUBLESHOOTING

No Power

- Verify the power cord is securely connected to both the switch and the electrical outlet.
- Ensure the electrical outlet is functional.

No Network Connectivity

- Check the Ethernet cable connections to ensure they are secure and not damaged.
- Verify the link/activity LEDs on the switch ports are illuminated.
- Confirm the connected device is powered on and configured correctly.
- Check the switch's configuration via the Web UI to ensure ports are enabled and VLAN settings are correct.

PoE+ Device Not Receiving Power

- Ensure the connected device is PoE+ compatible.
- Check the PoE status LEDs on the switch.
- Verify the switch's PoE power budget (195W) is not exceeded.
- Consult the switch's Web UI for PoE port settings and power allocation.

Enhanced Security Features

The switch includes advanced security features such as IP-MAC port binding to detect and block deliberate network attacks, and IPv6 First Hop Security for protection against address spoofing and man-in-the-middle attacks on IPv6 networks. If experiencing security-related issues, review these configurations in the management interface.
