5. OPERATING MODES

The INALSA Master Vac WD 12 offers three distinct operating modes:

Figure 5.1: Dry Vacuuming and Wet Mopping Capabilities

This image illustrates the vacuum cleaner's dual functionality for both dry vacuuming and wet mopping, showcasing its versatility.

5.1 Dry Vacuuming

For dry dust and debris collection:

- Ensure the **Cloth Filter** is securely installed over the motor unit's filter cage. The HEPA filter is also suitable for dry use.
- Connect the hose to the **suction port** on the front of the SS container.
- Use the appropriate dry cleaning attachment, such as the 2-in-1 crevice nozzle or small round brush.

5.2 Wet Vacuuming

For liquid spills and wet cleaning:

- Remove the cloth filter. Install the **Sponge Filter** over the motor unit's filter cage.
- Connect the hose to the **suction port** on the front of the SS container.
- Use the wet & dry squeezing brush for optimal liquid pickup.
- **Important:** Do not overfill the tank. The vacuum cleaner has a buoy technology that will stop suction when the water level reaches its maximum.

5.3 Blower Function

For clearing leaves, dust from crevices, or drying surfaces:

- **Remove all filters** (cloth, sponge, HEPA) from the motor unit.

- Connect the hose to the **blower port** located on the top of the motor unit.
- Direct the hose towards the area to be cleared.

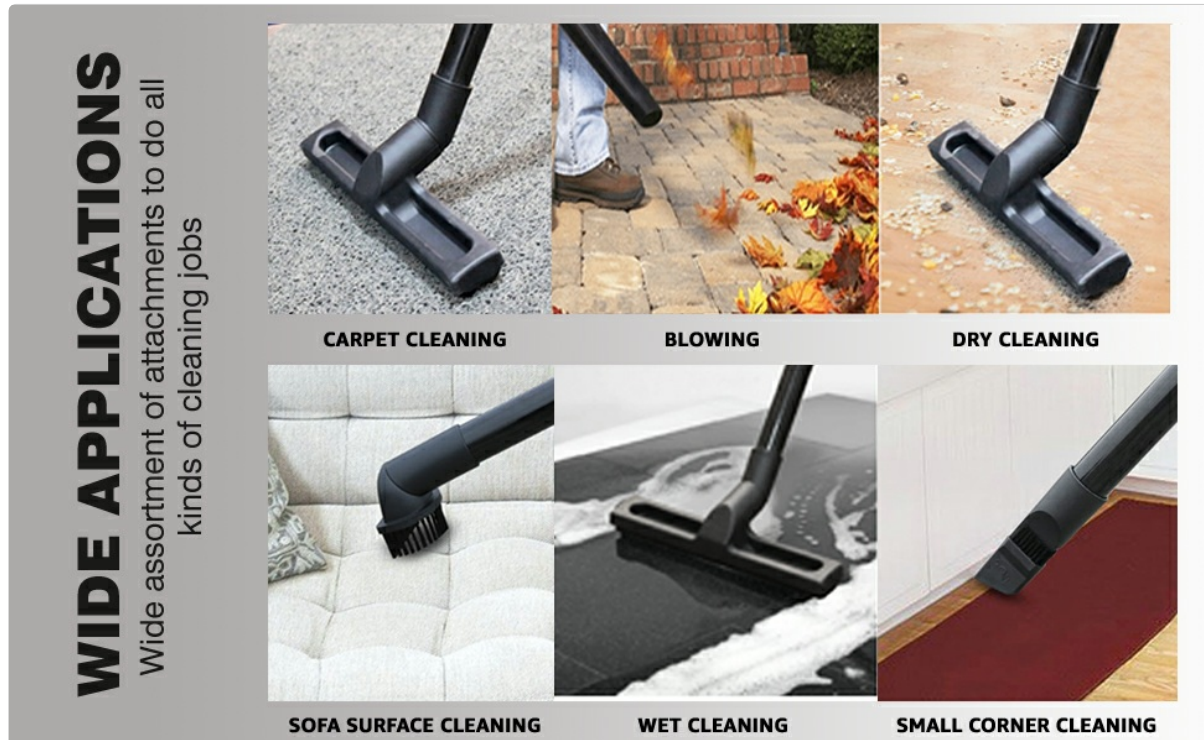

Figure 5.2: Filter Configuration for Each Mode

This image demonstrates the correct filter usage for each mode: no filter for blower function, cloth filter for dry vacuuming, and sponge filter for wet vacuuming.

6. OPERATION

1. **Prepare the Vacuum:** Ensure the correct filter is installed for your task (dry, wet, or blower).
2. **Connect Power:** Plug the power cord into a suitable electrical outlet. The 4-meter power cable provides ample reach.
3. **Turn On:** Press the ON/OFF switch located on the motor unit to start the vacuum cleaner.
4. **Clean:** Guide the appropriate attachment over the surface to be cleaned. For dry vacuuming, move steadily to allow suction to pick up debris. For wet vacuuming, move slowly to allow the brush to collect liquids.
5. **Turn Off:** Once cleaning is complete, press the ON/OFF switch to turn off the appliance.
6. **Unplug:** Disconnect the power cord from the outlet.

Cleaning Range

The INALSA Master Vac WD 12 offers an extensive cleaning range of over 7.0 meters, allowing you to clean large areas without frequently unplugging. This is achieved through its 1.8m flexible hose pipe, 3 x 0.3m extension tubes, and a 4.0m power cord.

Figure 6.1: Extended Cleaning Range Components

This image illustrates the components contributing to the vacuum cleaner's extensive cleaning range: three 0.30m extension tubes, a 1.8m flexible hose pipe, and a 4.0m power cord.

7. MAINTENANCE

Regular maintenance ensures optimal performance and extends the life of your vacuum cleaner.

7.1 Emptying the Tank

- Always unplug the vacuum cleaner before emptying.
- Unlatch the clips on the side of the container and carefully lift off the motor unit.
- Dispose of collected dry debris or pour out liquids from the stainless steel tank.
- Clean the inside of the tank with a damp cloth if necessary and dry thoroughly before reassembly.

7.2 Filter Care

Filters are crucial for performance and motor protection. Clean or replace them regularly.

Figure 7.1: Cloth and Sponge Filters

This image shows the cloth filter used for dry vacuuming and the sponge filter used for wet vacuuming, highlighting their distinct applications.

- **Cloth Filter (for Dry Use):** After dry vacuuming, remove the cloth filter and gently shake off accumulated dust. It can be hand-washed with mild soap and water. Ensure it is completely dry before re-installing.
- **Sponge Filter (for Wet Use):** After wet vacuuming, remove the sponge filter and rinse it under running water. Squeeze out excess water and allow it to air dry completely before storage or next use.
- **HEPA Filter:** The HEPA filter should be cleaned periodically by tapping it gently to dislodge dust. Do not wash the HEPA filter unless specified by the manufacturer, as it can damage the filter media. Replace the HEPA filter if it appears heavily soiled or damaged.

7.3 Cleaning Accessories

Wash all nozzles, brushes, and extension pipes with water and mild detergent. Rinse thoroughly and allow them to air dry before storing.

7.4 Storage

Store the vacuum cleaner and its accessories in a cool, dry place, away from direct sunlight and moisture.
