TROUBLESHOOTING

If you encounter any issues with your JUMMICO desk, refer to the following common problems and solutions:

Problem	Possible Cause	Solution
Desk does not move or only one leg moves.	Power supply issue, loose cable connection, motor malfunction, or imbalance.	Check if the power cable is securely plugged into both the desk and the wall outlet. Ensure all motor cables are properly connected. Try resetting the desk (refer to specific reset instructions in the full manual if available, or unplug for 30 seconds and replug). If only one leg moves, check for obstructions or damage to that leg's mechanism.
Desk stops moving unexpectedly.	Anti-collision system activated, overload, or overheating.	Check for any obstructions around the desk. Reduce the weight on the desk if it exceeds the maximum load capacity. Allow the desk to cool down if it has been used continuously for an extended period.
Control panel display shows an error code.	Specific system error.	Note the error code and refer to the detailed troubleshooting section in the complete product manual or contact JUMMICO customer support with the code.
Wireless charging not working.	Phone not compatible, misaligned, or power issue.	Ensure your device supports wireless charging. Reposition the device on the charging pad. Check if the desk is powered on.
