## Setup (Installation)

Follow these steps for proper installation:

1. **Identify Mounting Location:** Choose a suitable wall location. Ensure the wall material (e.g., solid concrete, wood studs) can support the rack and its intended load.
2. **Assemble Pipe Sections:** Carefully thread the pipe sections together to form the complete rack structure. Ensure all connections are tight.
3. **Mark Drill Points:** Hold the assembled rack against the wall at the desired height and use a pencil to mark the positions for drilling through the flange holes. Use a level to ensure the rack is straight.
4. **Drill Holes:** Using an appropriate drill bit for your wall type, drill holes at the marked positions.
5. **Install Expansion Nails (for Solid Walls):** If installing on a solid wall (e.g., concrete, brick), insert the provided expansion nails into the drilled holes. Tap them gently with a hammer until flush with the wall surface.
6. **Attach Rack Bases:** Align the flanges of the rack with the drilled holes (and expansion nails, if applicable). Insert the screws and tighten them securely with a screwdriver. Ensure the rack is firmly attached to the wall.
7. **Final Check:** Gently pull on the installed rack to confirm it is stable and securely mounted before hanging any garments.

This image illustrates the three main steps for easy installation: 1. Use a drill to create holes in the wall. 2. Install expansion nails (for solid walls). 3. Fix the product securely with screws.
