SETUP INSTRUCTIONS

Unpacking and Safety Precautions

Carefully unpack all components from the packaging. It is recommended to wear gloves during assembly to prevent potential injuries from sharp edges. A rubber mallet may be required to securely join the plug-in connections.

Included Components:

- 1 x Shelving unit to be assembled (various steel frame components and shelf panels)
- 16 x Floor protectors

Assembly Steps

The shelving unit utilizes a plug-in system for assembly. Follow these steps:

1. Begin by connecting the vertical support beams to the horizontal crossbeams to form the base frame. Ensure all connections are fully seated. A rubber mallet can be used for a firm fit.

2. Attach the next set of vertical supports to the top of the assembled base frame.
3. Insert the shelf panels into the designated slots on the horizontal crossbeams. The height of each shelf can be adjusted during assembly.
4. Continue adding vertical supports and shelf panels until all five shelves are in place.
5. Once the main structure is complete, attach the plastic floor protectors to the bottom of the vertical supports to prevent scratching surfaces.

Adjusting Shelf Height

The height of each of the five shelves can be adjusted to accommodate items of various sizes. During assembly, simply choose the desired slot on the vertical supports for each shelf panel. If adjusting after assembly, ensure the unit is unloaded and carefully disassemble the relevant sections to reposition the shelves.

Configuring as Two Separate Units

The design allows for the unit to be split into two separate, smaller storage racks, each approximately 75 cm in height. To do this, assemble the components to create two distinct units instead of one tall unit. This provides flexibility for different storage needs and spaces.

TROUBLESHOOTING

Stability Issues

If the shelving unit appears unstable:

- Ensure all plug-in connections are fully seated and secure. Use a rubber mallet if necessary to tap components firmly into place.
- Verify that the unit is placed on a flat, level surface.

- Check that weight is distributed evenly across the shelves and not concentrated on one side or a single shelf.

Load Distribution

To prevent bowing or damage to shelves, avoid placing excessively heavy items in the center of a shelf without support. Distribute heavier items closer to the vertical supports.
