Cumbor M7V2

Cumbor 36" Extra Tall Baby Gate User Manual

Model: M7V2

INTRODUCTION

This manual provides comprehensive instructions for the installation, operation, and maintenance of your Cumbor 36" Extra Tall Baby Gate. Designed for safety and convenience, this gate is suitable for securing areas from babies, toddlers, and pets. Please read all instructions carefully before assembly and use to ensure proper function and safety.

Important Safety Information:

- Always ensure the gate is securely installed before use.
- Do not use this gate at the top of stairs without proper hardware mounting.
- Regularly check all parts for wear, damage, or loose connections.
- Never leave children unattended near the gate.

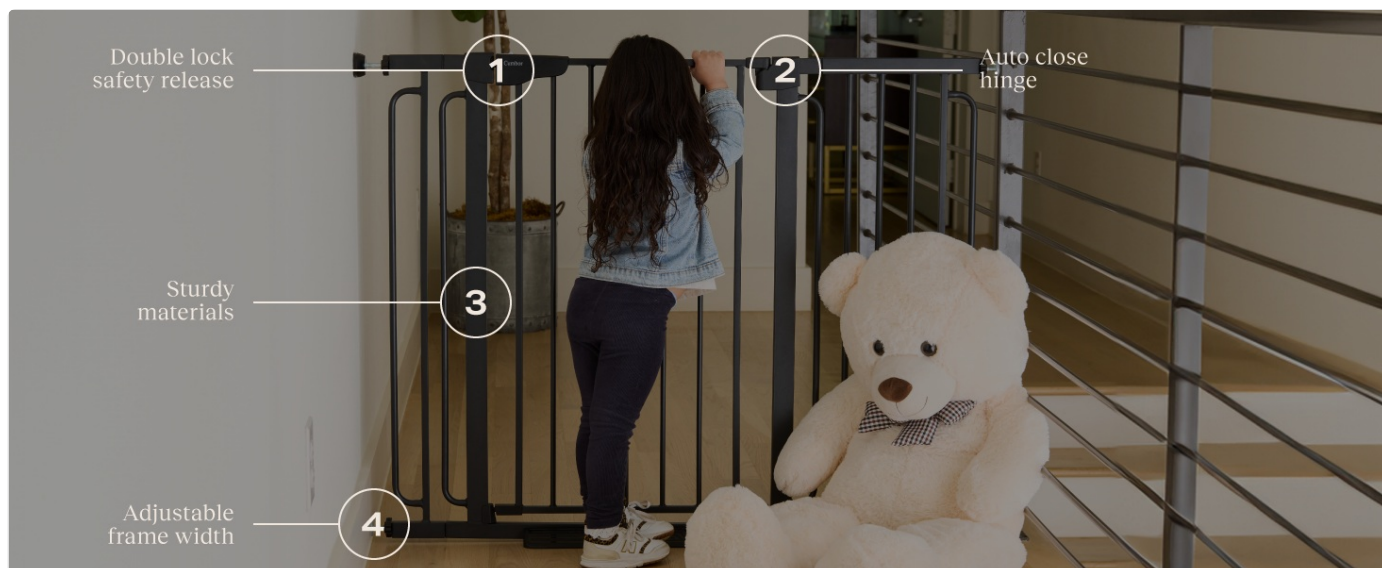

SETUP AND INSTALLATION

The Cumbor Baby Gate offers versatile installation options, primarily designed for pressure mounting without the need for drilling. Hardware mounting is also an option for added security, especially at the top of stairs.

1. Pressure-Mounted Installation (No Hardware Required)

This method is ideal for doorways and hallways where drilling is not desired. The gate is held in place by pressure against the walls.

1. **Positioning the Gate:** Place the gate in the desired opening. Initially, there will be a gap between the gate frame and the door. This is normal and will close as the tension bolts are tightened.
2. **Tightening Tension Bolts:** Rotate the tension bolts located at each corner of the gate. Turn them clockwise to extend and apply pressure against the walls. Continue tightening until the gate is secure and the initial gap between the lock and frame disappears.
3. **Removing Zip Tie:** Once the gate is fully secure and the gap is closed, you may remove the zip tie connecting the door and frame.

Pressure-Mount with Rotating Bolt: Simply rotate the tension bolt until the gate is secure and the gap between the lock and frame disappears.

1 Keeps babies and pets safely behind the gate

2 Ensures your gate closes behind you every time

3 Can withstand 150 lbs of weight

4 No tools needed for installation

Close the Gap & Remove Zip Tie: The gap between the lock and door frame will disappear as you rotate the tension bolt. Once closed, remove the zip tie.

For rounded banisters, a Y pressure mount (sold separately or included with specific models) can be used to provide a secure fit.

Keep Curves Safe: The Y pressure mount provides a secure solution for rounded banisters.

2. Hardware Installation (Optional)

For maximum security, especially when installing at the top of stairs, hardware mounting is recommended.

1. **Install Wall Anchors:** Place the gate where you plan to install it and use a pencil to mark the position of the screw holes for the wall anchors. Use a drill to punch the holes, insert the wall anchors, and tap into place with a hammer.
2. **Attach Wall Cups:** Attach wall cups with screws using a screwdriver or drill. Place the gate into the wall cups and rotate tension bolts to increase pressure until secure.

AWARD-WINNING

Don't just take our word for it...

Cumbor draws on decades of customer experience to raise the bar on child safety and usability, all while delivering excellent value for money. That's why parents, children, and experts chose us for the **Mom's Choice Award** and **Family Choice Award**.

Step 1 (With Hardware) - Install Wall Anchors: Mark holes, drill, insert anchors.

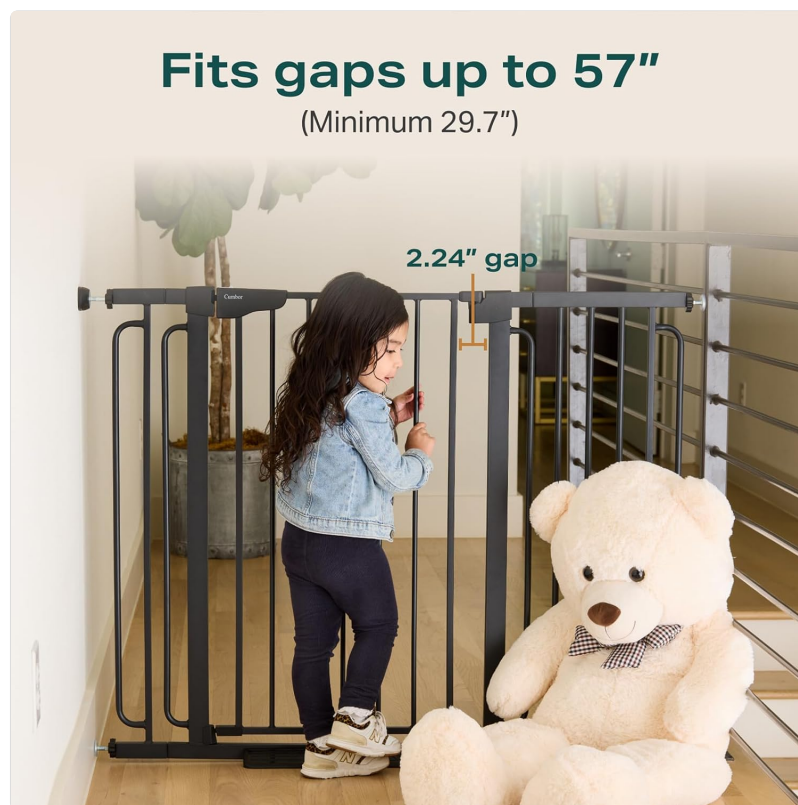

Safety and security for every environment

Step 2 (With Hardware) - Attach Wall Cups: Secure wall cups and tighten tension bolts.

3. Adjusting Gate Width

The Cumbor gate is designed to fit openings from 29.7 inches up to 57 inches wide, making it suitable for various doorways, hallways, and stair openings.

Adjustable Width: The gate fits openings from 29.7 inches to 57 inches.

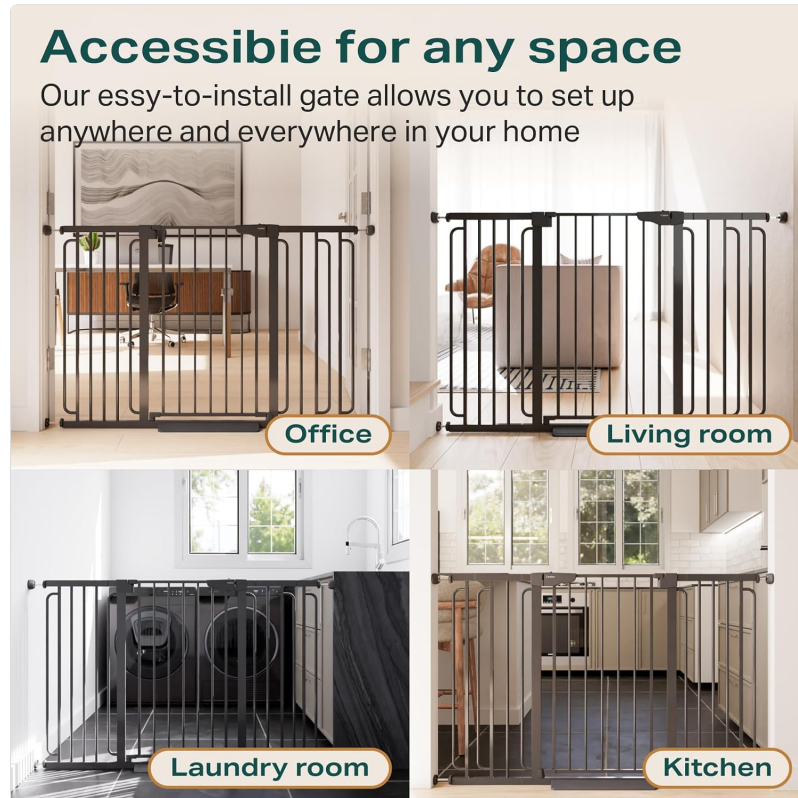

OPERATING THE GATE

Your Cumbor Baby Gate is equipped with features for easy and secure operation.

1. Opening and Closing

- **Single-Hand Operation:** The gate is designed for convenient one-hand operation, allowing you to open it while carrying a child or other items.

- **Auto-Close Feature:** The gate will automatically close behind you when released, ensuring it is always secured.
- **90° Hold-Open:** For multiple pass-throughs, the gate can be opened to a 90-degree angle and will remain open until gently pushed to close.

Auto-Close & Auto-Lock Hinge: The gate features an auto-close mechanism and can open up to 180 degrees.

2. Double-Lock Safety Release

The gate incorporates a double-lock safety release mechanism to prevent children or pets from opening it unintentionally. To open, simultaneously press the button and lift the gate handle.

Double-Lock Safety Release: Enhanced security prevents unwanted gate openings by children or pets.

3. Accessible Ramp

An accessible ramp is included to allow for smooth passage, particularly useful when pushing strollers or moving items through the gate opening.

Accessible Ramp: The ramp installs in seconds, allowing for easy passage through the gate.

MAINTENANCE

Regular maintenance will help prolong the life and ensure the continued safe operation of your Cumbor Baby Gate.

- **Cleaning:** Wipe the gate with a damp cloth and mild soap. Do not use abrasive cleaners or harsh chemicals, as they may damage the finish.
- **Inspection:** Periodically check all components, including the frame, tension bolts, locking mechanism, and hinges, for any signs of wear, damage, or looseness.
- **Tightening:** If the gate feels less secure over time, re-tighten the tension bolts to restore proper pressure.

TROUBLESHOOTING

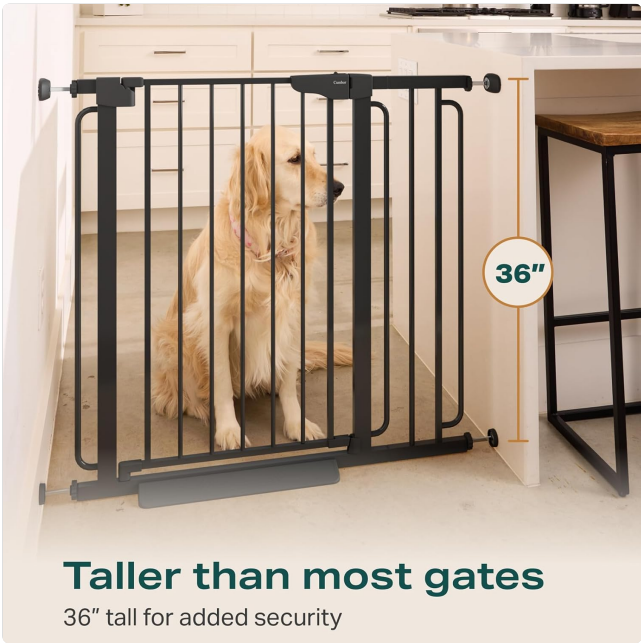

Here are solutions to common issues you might encounter:

Problem	Possible Cause	Solution
Gate does not feel secure or wobbly.	Tension bolts are not tightened enough.	Tighten all four tension bolts evenly until the gate is firmly secured in the opening. Ensure the gap between the lock and frame is closed.
Gate does not auto-close properly.	Gate is not level or hinges are obstructed.	Check that the gate is installed level. Ensure no debris or objects are obstructing the hinge mechanism. Re-adjust tension if necessary.

Problem	Possible Cause	Solution
Gate is difficult to open/close.	Excessive pressure from tension bolts or mechanism needs lubrication.	Slightly loosen the tension bolts. If still stiff, apply a small amount of silicone-based lubricant to the hinge points (avoiding contact with children).
Initial gap between gate and frame remains after installation.	This gap is designed to close as tension is applied.	Continue tightening the tension bolts. The gap will disappear as sufficient pressure is achieved. This is a normal part of the pressure-mount design.

SPECIFICATIONS

Model Number	M7V2
Product Dimensions	57"W x 36"H (Adjustable width from 29.7" to 57")
Item Weight	20.1 pounds
Material Type	Alloy Steel
Color	Black
Target Species	Baby, Dogs, Pets, Cats, Child
Age Range (Description)	6-24 Months
Closure Type	Automatic
Mounting Type	Pressure Mounted (Optional Hardware Mounting)
UPC	850055912038

Taller than Most Gates: This gate stands 36 inches tall for enhanced security.

WARRANTY AND SUPPORT

Cumbor is committed to providing high-quality products. For specific warranty details and support, please refer to the
