Daytona 41539

Daytona High Visibility Mirror Instruction Manual

Model: 41539

1. PRODUCT OVERVIEW

The Daytona High Visibility Mirror is a stick-on type mirror designed to enhance your motorcycle's rear view. It features a wide-angle R1000 curvature and an anti-glare blue tint, improving visibility and reducing glare from headlights.

This product is designed to be applied directly over your existing genuine mirrors, maintaining the original aesthetic while providing a significantly wider field of view and reducing blind spots.

2. PRODUCT FEATURES

- **Wide-Angle View:** Features an R1000 curvature, providing a broader field of view compared to standard mirrors (typically R1300), effectively reducing blind spots.
- **Anti-Glare Blue Tint:** The blue mirror surface reduces glare from headlights of vehicles behind you, enhancing safety during night riding.
- **Easy Installation:** Designed as a stick-on type, it can be easily applied to your genuine mirror.
- **Maintains Original Style:** Integrates seamlessly with your motorcycle's existing mirror housing.
- **Safety Standard Compliant:** Conforms to new safety standards and is compatible with genuine mirrors bearing ECE certification number E11 002091.

4. INSTALLATION INSTRUCTIONS

Please follow these steps carefully for proper installation. This product uses strong adhesive, and repositioning is not possible once applied. Forcibly removing it may damage the mirror or the original mirror.

1. **Position Confirmation:** Before removing the adhesive backing, carefully place the High Visibility Mirror over your genuine mirror to confirm the correct alignment and fit.
2. **Degreasing:** Thoroughly clean and degrease the surface of your genuine mirror. Ensure it is free of dust, dirt, and oils for optimal adhesion.
3. **Apply Double-Sided Tape:** Remove the protective film from the double-sided tape on the back of the High Visibility Mirror.
4. **Attachment:** Carefully align the High Visibility Mirror with the genuine mirror and press firmly to ensure complete adhesion.

本商品は強力な接着力で張り付いているので、剥がすことはできません。無理に剥がすと本商品および、純正ミラー側も割れてしまう可能性がありますのでご注意ください。

Image 5: Step-by-step installation process.

Important Installation Notes:

- **Temperature:** If installing in low temperatures, gently warm both the genuine mirror and the High Visibility Mirror with a hairdryer to improve adhesive strength.
- **Adhesion Time:** Allow approximately 24 hours for the adhesive tape to achieve full bonding strength. During this period, avoid exposing the mirror to water or strong vibrations.
- **Misalignment:** Due to manufacturing tolerances, slight misalignments between the product and the genuine mirror may occur. If a gap is visible, a black oil-based marker can be used along the edge of the genuine mirror to minimize its appearance.
- **Glass Product:** This product is made of glass. Handle with extreme care to prevent injury or breakage during installation.

5. OPERATION AND USAGE

Once installed, the Daytona High Visibility Mirror provides an expanded field of view. Be aware that the wide-angle

nature of this mirror will alter your perception of distance compared to a standard mirror. Objects may appear further away than they actually are.

Exercise caution and take time to adapt to the new sense of distance while driving, especially when changing lanes or parking.

6. MAINTENANCE

To ensure the longevity and clarity of your High Visibility Mirror, follow these maintenance guidelines:

- **Cleaning:** Clean the mirror surface with a soft, damp cloth. Use only water or a mild, non-abrasive glass cleaner.
- **Avoid Chemicals:** Do not use chemical cleaners, solvents, or abrasive materials on the mirror, as these can damage the special coating and tint.
- **Edge Care:** The mirror edges are smooth, but always handle with care to avoid cuts.

7. TROUBLESHOOTING

Common Issues and Solutions:

- **Poor Adhesion:** If the mirror does not adhere properly, ensure the original mirror surface was thoroughly cleaned and degreased before application. Low temperatures can also affect adhesion; re-apply after warming the surfaces.
- **Visible Gap After Installation:** If a slight gap appears between the High Visibility Mirror and the genuine mirror due to manufacturing variations, you can use a black oil-based marker to carefully color the edge of the genuine mirror to make the gap less noticeable.
- **Distorted Perception of Distance:** This is a characteristic of wide-angle mirrors. It is not a defect. Allow yourself time to adjust to the new visual perspective. Drive cautiously until you are accustomed to it.

8. SPECIFICATIONS

Specification	Detail
Brand	Daytona
Model Number	41539
Color	Blue
Mirror Lens Type	Convex (Wide-angle R1000)
Special Features	Anti-glare, Lightweight
Installation Position	Right, Left
Product Weight	110 g
Included Components	Stick-on mirror body, double-sided tape
