SETUP GUIDE

Step 1: Install Philips Hue Lighting (If Applicable)

If you are setting up a new Philips Hue system, begin by installing your Philips Hue lights. This camera integrates with your existing Hue lighting system for enhanced security features.

Step 2: Connect the Philips Hue Bridge

The Philips Hue Bridge is essential for unlocking the full range of smart home security features, including light and sound alarms, mimic presence automation, and expanding your smart lighting setup. Connect the Bridge to your home network.

Step 3: Download the Philips Hue App

Download the Philips Hue app from your device's app store. This app is used to control your camera, manage settings, view live streams, and receive notifications.

Image: Screenshots of the Philips Hue app on a smartphone, showing the home screen with various lighting controls and scene selections.

Step 4: Camera Installation and Pairing

Mount the camera using the provided camera mount, screws, and anchors. The camera is designed for both indoor and outdoor use. Once mounted, open the Philips Hue app and follow the on-screen instructions to pair your camera with your Hue Bridge and system.

OPERATING INSTRUCTIONS

Real-Time Monitoring and Notifications

Access a crisp 1080p HD live stream through the Hue app. The camera detects motion and sound, sending instant notifications to your mobile device. You can define specific "Activity Zones" or "Package Zones" to receive alerts based on the type of detection (person, animal, vehicle, or package).

Monitor your home in real time

Image: A woman viewing a notification on her smartphone from the Philips Hue Secure camera, indicating motion detection, with a live feed inset showing a person at a doorway.

Get instant, motion-activated alerts

Receive push notification alerts on your mobile device any time Philips Hue Secure cameras detect motion — no matter where you are.

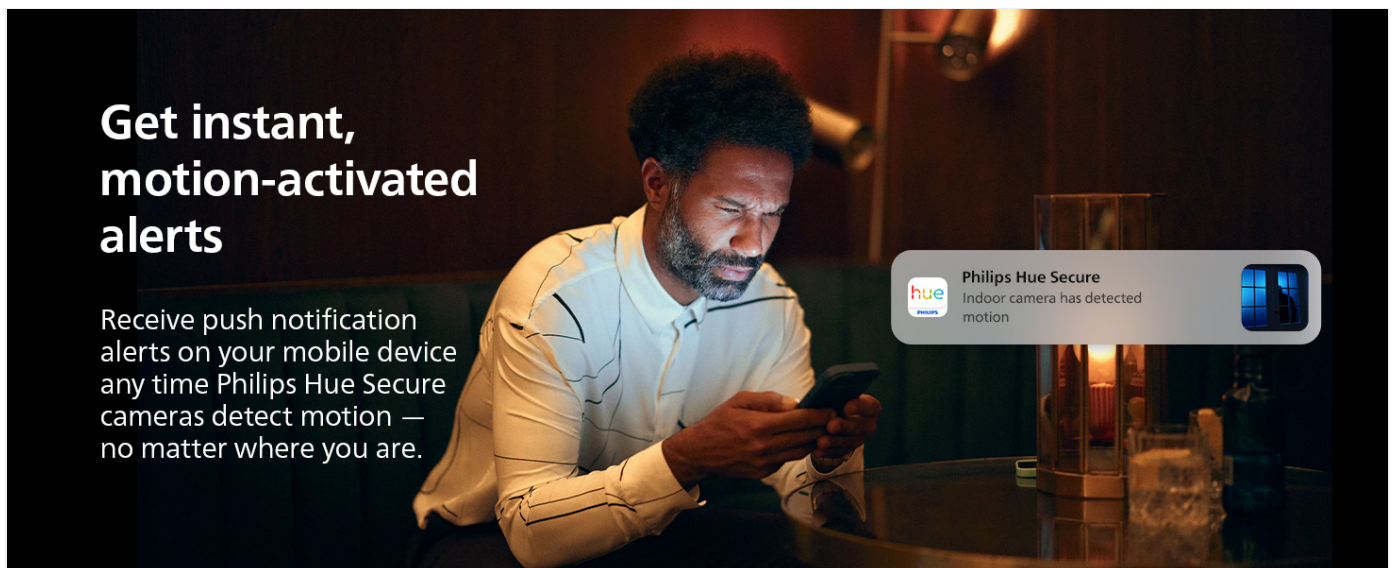

Image: A man looking at his phone, which displays a Philips Hue Secure notification indicating motion detected by an indoor camera.

Two-Way Talk

Utilize the integrated speaker and microphone for two-way communication. This feature allows you to speak with visitors or deter unwanted individuals directly through the camera via the Hue app.

Image: A man on a bicycle using his smartphone to engage in two-way talk through the Philips Hue Secure camera, with a live view inset showing a person at a door.

Night Vision

The camera is equipped with night vision capabilities, automatically adjusting to low light conditions to provide clear images day and night. It can also act as a motion sensor to trigger Philips Hue lights automatically when motion is detected in the dark.

Image: A split image showing two Philips Hue Secure cameras, one illuminated with blue light and the other with red light, demonstrating night vision capabilities and color options.

Mimic Presence Automation

Utilize the Mimic presence automation feature within the Hue app to automatically turn your lights on and off, creating the impression that someone is home, even when you are away. This adds an extra layer of security.

End-to-end encryption that keeps your data safe

Image: A man looking at his phone, which displays a "Trigger alarm" notification for the Philips Hue app, indicating activation of sound and lights, with a background showing a living room with smart lighting.

The camera's night vision detects motion to turn on lights automatically

Your Philips Hue Secure camera can act as a motion sensor, turning on your Philips Hue lights when it detects motion

Arming and Disarming

Arm and disarm your security system directly from the Home tab within the Philips Hue app. This allows for quick control over your camera's active monitoring status.

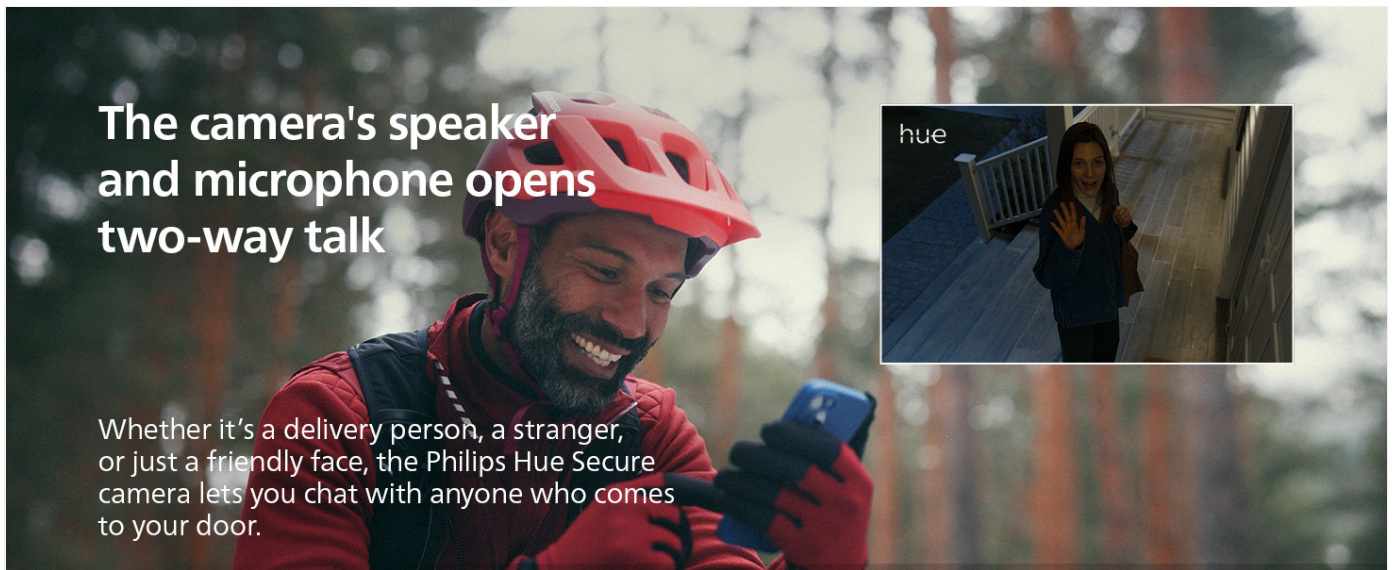

Image: A living room at night with Philips Hue lighting creating a secure ambiance, illustrating the ability to arm and disarm the system via the Hue app.

Light and Sound Alarms

In the event of suspicious activity, you can trigger light and sound alarms through the Hue app to deter potential intruders. This feature requires a Philips Hue Bridge and compatible Hue lights.

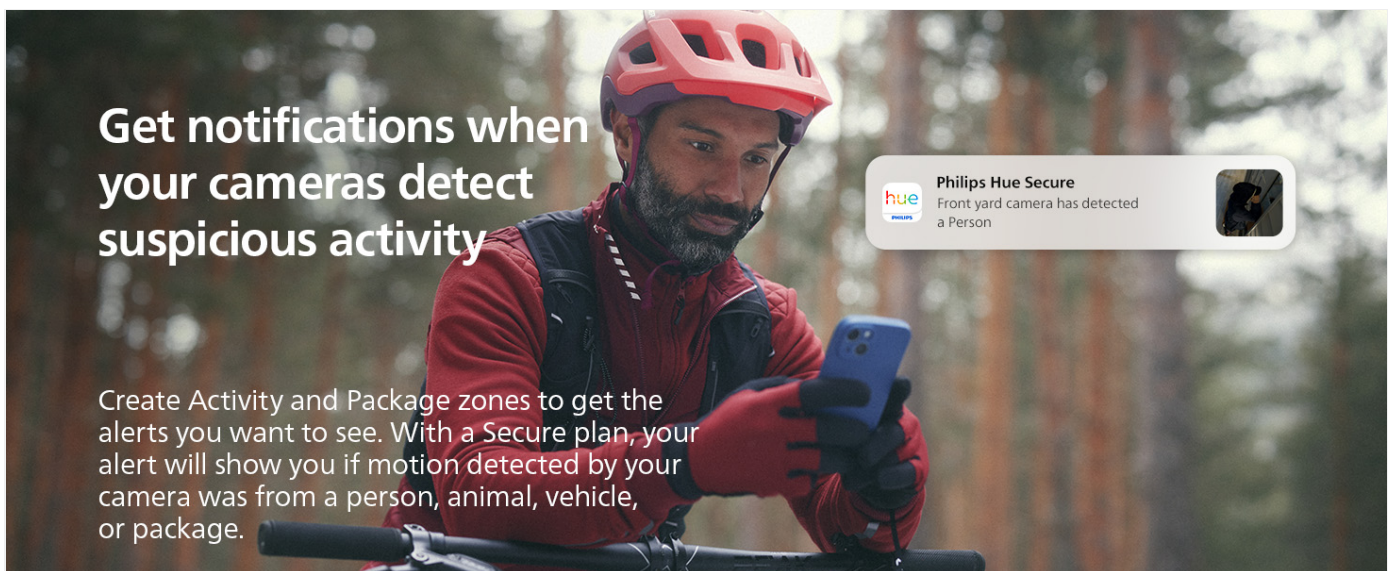

Image: An indoor scene bathed in red light with a silhouette of a person near a door, depicting the activation of light and sound alarms to deter intruders.

Privacy and Data Security

Philips Hue Secure cameras employ end-to-end encryption for all video and audio recordings. Only you and authorized users can access the recorded content, ensuring your privacy and data security.

Control lights and security with the Hue app

Image: Two individuals smiling while looking at their smartphones, with text emphasizing end-to-end encryption, two-factor authentication, and a unique passphrase for accessing video clips and history, ensuring data privacy.

MAINTENANCE

Battery Charging

The camera is battery-powered. Monitor the battery level through the Philips Hue app. When the battery is low, remove the camera from its mount and charge it using the provided USB A cable and Power Supply Unit. Ensure the camera is fully charged before re-mounting for optimal performance.

Cleaning

To maintain optimal image quality, periodically clean the camera lens with a soft, dry, lint-free cloth. Do not use harsh chemicals or abrasive materials, as these can damage the lens or camera body. For outdoor cameras, gently wipe away any accumulated dust or debris.

TROUBLESHOOTING

- **Camera Not Connecting to Wi-Fi:** Ensure your Philips Hue Bridge is powered on and connected to your home network. Verify that the camera is within range of your Wi-Fi signal. Try restarting your router and the Hue Bridge. If issues persist, attempt to re-pair the camera through the Hue app.
- **Poor Video Quality:** Check your internet connection speed. Ensure the camera lens is clean and free from obstructions. For night vision, ensure there are no strong light sources directly facing the camera that could interfere with its infrared sensors.
- **No Motion Notifications:** Confirm that motion detection is enabled in the Hue app settings for the specific camera. Check notification settings on your mobile device to ensure the Hue app is permitted to send notifications. Adjust Activity Zones to cover the desired monitoring area.
- **Battery Draining Quickly:** Frequent motion detection, live streaming, and two-way talk can consume battery faster. Reduce sensitivity settings or the number of Activity Zones if possible. Ensure the camera is not in an area with constant, unnecessary triggers.
- **Two-Way Talk Issues:** Verify your mobile device's microphone and speaker are functioning correctly. Ensure the camera's microphone and speaker are not obstructed. Check the volume settings in the Hue app.

WARRANTY AND SUPPORT

For warranty information, please refer to the documentation included with your purchase or visit the official Philips Hue website. For technical support, contact Philips Hue customer service through their website or the support section of the Philips Hue app.
