2. IMPORTANT NOTES BEFORE INSTALLATION

- **Difficulty Level:** Replacing the back glass is a challenging procedure, especially for individuals without prior experience. The original glass is often fused into the frame with strong adhesive.
- **Professional Assistance:** If you find the replacement process difficult, it is highly recommended to seek assistance from a professional repair shop, ideally one equipped with a laser machine for glass removal.
- **Full Disassembly:** While it is possible to replace the back glass directly, for first-time users, it is advisable to fully disassemble the device and remove the entire back housing.
- **Patience is Key:** Removing the old, broken glass is the most time-consuming and difficult part of the process. Continuous heating may be required. Exercise patience throughout the procedure.
- **Video Instructions:** Search for relevant replacement videos on platforms like YouTube and follow

IMPORTANT NOTE BEFORE PURCHASING

1) Very Hard to Install.

It's very hard for non-professionals to remove the broken back glass because the glass is fused into the frame with strong adhesive. Highly suggest finding a repair shop with a laser machine if you find it is difficult to replace.

2) Better to Fully Disassemble The Device

You can replace the back glass directly without disassemble your phone if you own professional repair skill. But it's better to fully disassemble your phone and take the whole back housing out to replace the broken back glass for your first try, please watch related video on youtube and follow our instruction step by step.

3) Be Patient during Replacing

Getting the old glass off is the hardest part of the entire process, it may cost hours. Need continuous heating when removing the back glass.

4. INSTALLATION GUIDE

Follow these steps carefully for the back glass replacement. Remember to consult online video guides for visual assistance.

4.1 Prepare Your Workspace

Ensure you have a clean, well-lit, and organized workspace. Turn off your iPhone and disconnect it from any power sources.

4.2 Remove the Broken Back Glass

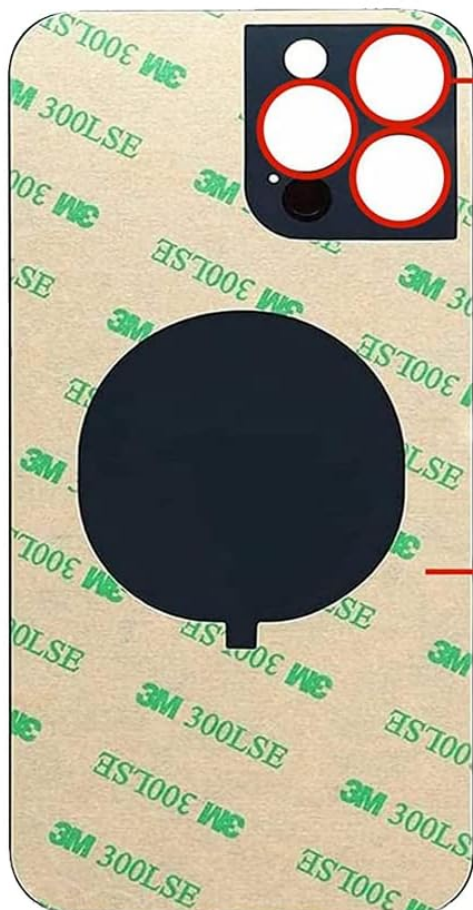

1. Apply heat to the edges of the back glass to soften the adhesive. A heat gun or hairdryer can be used. Apply heat evenly and avoid overheating any single area.
2. Carefully use the metal knife and opening tool to pry up the broken glass. Work slowly and meticulously to avoid damaging internal components.
3. Once the broken glass is removed, thoroughly clean the frame of any remaining adhesive residue and glass shards using the provided cleaning brush and wipes. Ensure the surface is smooth and free of debris for optimal adhesion of the new glass.

4.3 Install the New Back Glass

The replacement back glass features a larger camera hole, which eliminates the need to remove the existing camera bezel/lens. This design simplifies the installation process.

Pre-installed Strong Double-Sided 3M Adhesive

“Big Hole” glass perfectly fit the camera lens

①

This product features a large camera hole, which is slightly larger than original camera hole. So you don't have to remove the existing camera bezel/lens, which saves you time during installation.

②

Pre-installed strong Double-Sided adhesive make replacing easier, strong stickiness will hold the back glass tightly, remember to remove the protective film before install

Image: The new back glass with pre-installed adhesive and a larger camera hole.

1. Carefully peel off the protective film from the pre-installed double-sided 3M adhesive on the new back glass.
2. Align the new back glass precisely with the phone's frame, ensuring the camera hole aligns correctly with the camera module.
3. Gently press the new back glass onto the frame, applying even pressure across the entire surface to ensure proper adhesion.
4. Use the provided rubber bands to bind the phone for a few hours (e.g., 2-4 hours) to allow the adhesive to cure and create a strong bond.
