MAINTENANCE

To ensure the longevity and continued performance of your Yaheetech bed frame, follow these maintenance guidelines:

- **Regular Cleaning:** Wipe down the metal frame with a soft, damp cloth to remove dust and dirt. Avoid using harsh chemicals or abrasive cleaners, which can damage the finish.
- **Check Connections:** Periodically inspect all bolts and screws to ensure they remain tight. Over time, vibrations from movement can cause them to loosen. Retighten as necessary, but do not overtighten.

- **Avoid Excessive Weight:** Do not exceed the maximum weight capacity of 363 kg to prevent damage to the frame and ensure safety.
- **Protect Floor:** Ensure the rubber caps on the bottom of the legs are intact to protect your flooring from scratches. Replace if damaged.

TROUBLESHOOTING

Here are solutions to common issues you might encounter with your bed frame:

Problem	Possible Cause	Solution
Squeaking Noises	Loose bolts or connections; friction between metal parts.	Tighten all bolts and screws. Apply a small amount of lubricant (e.g., silicone spray) to contact points between metal parts if tightening does not resolve the issue.
Bed Frame Feels Unstable	Bolts not fully tightened; incorrect assembly of support legs or slats.	Re-check all connections and ensure they are securely tightened. Verify that all support legs are touching the floor and slats are properly seated in their notches.
Mattress Sliding	Anti-slip baffles not engaged or damaged.	Ensure the mattress is properly positioned against the anti-slip baffles on the side rails. If baffles are damaged, contact customer support.
