- **Slats and Supports:** Ensure all slats are properly seated and screws are tightened periodically to maintain stability and prevent noise.

7. TROUBLESHOOTING

If you encounter any issues with your bed frame, please refer to the following common solutions:

Problem	Possible Cause	Solution
Bed frame is noisy/squeaking.	Loose connections or friction between components.	Ensure all bolts and screws are securely tightened. Check that the noise-free foam on the slats is intact and properly positioned.
Hydraulic lift is difficult to raise or lower.	Overload, or new hydraulic pistons requiring initial use.	Ensure the mattress weight (including any bedding) does not exceed 154 lbs. New hydraulic pistons may require a few cycles of opening and closing to operate smoothly. If the issue persists, contact customer support.
Charging station not working.	Power cord not connected, or power outlet issue.	Verify the 6.6-foot power cord is fully plugged into a working wall outlet. Test the wall outlet with another device.
Mattress slips on the frame.	Anti-slip design not engaged or mattress incompatibility.	Ensure the mattress is properly centered on the frame and the anti-slip features are utilized.
