## SETUP AND ASSEMBLY

---

Follow these steps for proper assembly of your Golpart shelving unit. It is recommended to assemble the unit in its intended location to account for any pipes or cables.

1. **Measure Your Space:** Before assembly, measure the width of your washer and dryer. The unit is designed for appliances up to 27 inches in width. The overall dimensions are 13.5”D x 29.5”W x 72”H.
2. **Install Plastic Clips:** Attach the plastic clips to the vertical support poles at the desired height for your first shelf. Ensure the flange fits into the groove and follow the arrow directions (upwards) on the plastic clip. The structural design includes a small gap between clips, which is normal and ensures the shelf is firmly anchored.
3. **Assemble Wire Shelves:** Slide the wire shelves down slowly onto the poles until the 4 sleeves fit snugly onto the plastic clips. The end with a notch should face downward.
4. **Adjust Shelf Height:** The wire shelves can be adjusted up and down to accommodate different washing machine types and storage needs. Simply reposition the plastic clips and slide the shelves into place.
5. **Attach Hanging Rod and Hooks:** Secure the hanging rod to the designated points on the upper section of the unit. Attach the two rotatable hooks to the side of the unit for hanging light clothing, towels, or cleaning supplies.
6. **Adjust Stability:** Use the leveling feet at the bottom of the poles to adapt the unit to uneven ground, ensuring a stable foundation.
7. **Wall Fixation:** For enhanced stability and safety, use the included wall anchor to securely fix the clothes rack to the wall.

## MAINTENANCE

---

To ensure the longevity and optimal performance of your Golpart shelving unit, follow these simple maintenance guidelines:

- **Cleaning:** Wipe down the metal surfaces with a soft, damp cloth. Avoid abrasive cleaners or harsh chemicals that could damage the protective coating.
- **Inspection:** Periodically check all connections, screws, and plastic clips to ensure they are secure. Tighten any loose parts as needed.
- **Protection:** The shelves are specially coated to protect against humidity damage, rust, and corrosion. While durable, avoid prolonged exposure to excessive moisture.
- **Leveling:** Re-adjust the leveling feet if the unit becomes unstable due to floor settling or movement.

## TROUBLESHOOTING

| Problem  | Possible Cause  | Solution  |
|--|---|---|
| Unit is wobbly or unstable.                          | Uneven floor; loose connections; unit not secured to wall.          | Adjust leveling feet until stable. Check and tighten all plastic clips and connections. Ensure the anti-tip device is properly installed and secured to the wall.   |
| Washer/dryer knocks into the unit.                   | Unit is too close to the appliance; appliance vibrates excessively. | Ensure the unit is centered and has adequate clearance around the appliance. Verify appliance is level and not vibrating excessively. Consider adjusting shelf height if the top of the appliance is hitting a shelf. |
| Clothes on hanging rod touch the appliance or floor. | Hanging rod is too low; clothes are too long for current setup.     | Adjust the height of the shelf supporting the hanging rod upwards. For very long garments, consider folding them or using alternative drying methods.   |
| Difficulty installing plastic clips or shelves.      | Clips not aligned correctly; not enough force applied.              | Ensure the flange of the plastic clip is fully seated in the pole's groove. Apply firm, even pressure when sliding shelves down onto clips. Refer to assembly diagrams.   |
