## 6. TROUBLESHOOTING

Before contacting customer service, review the following common issues and their potential solutions:

- Appliance does not operate:** Check if the power cord is securely plugged into the outlet. Verify the circuit breaker or fuse.
- Temperature is not cold enough:** Ensure the temperature setting is appropriate. Check if the doors are fully closed and sealed. Avoid overloading the compartments, which can restrict airflow.
- Unusual noises:** Some operational noises are normal (e.g., refrigerant flowing, fan operation). If noises are excessive or unusual, ensure the appliance is level and not touching walls or other objects.
- Excessive frost build-up:** Although frost-free, ensure doors are sealing properly and not left open for extended periods.
